woodsycart

Admin App — Complete User Guide

Every screen, tab, label, button and calculation explained

Version 1.0 · October 2026

How to use this guide

- **New to the app?** Read parts 1–3 first. They explain how WoodsyCart works as a business and how every price and profit figure is calculated. The rest of the app makes sense after that.
- **Looking for one screen?** Each screen has its own chapter, in the same order as the left menu.
- **Words in bold** are exactly what you see on screen (button names, tab names, labels).
- **"Tip"** boxes give good habits. **"Watch out"** boxes warn about things that cost money if done wrong.
- All money is in Indian Rupees (₹). All dates and times are Indian Standard Time.

29. Glossary

1. Getting started

1.1 Signing in

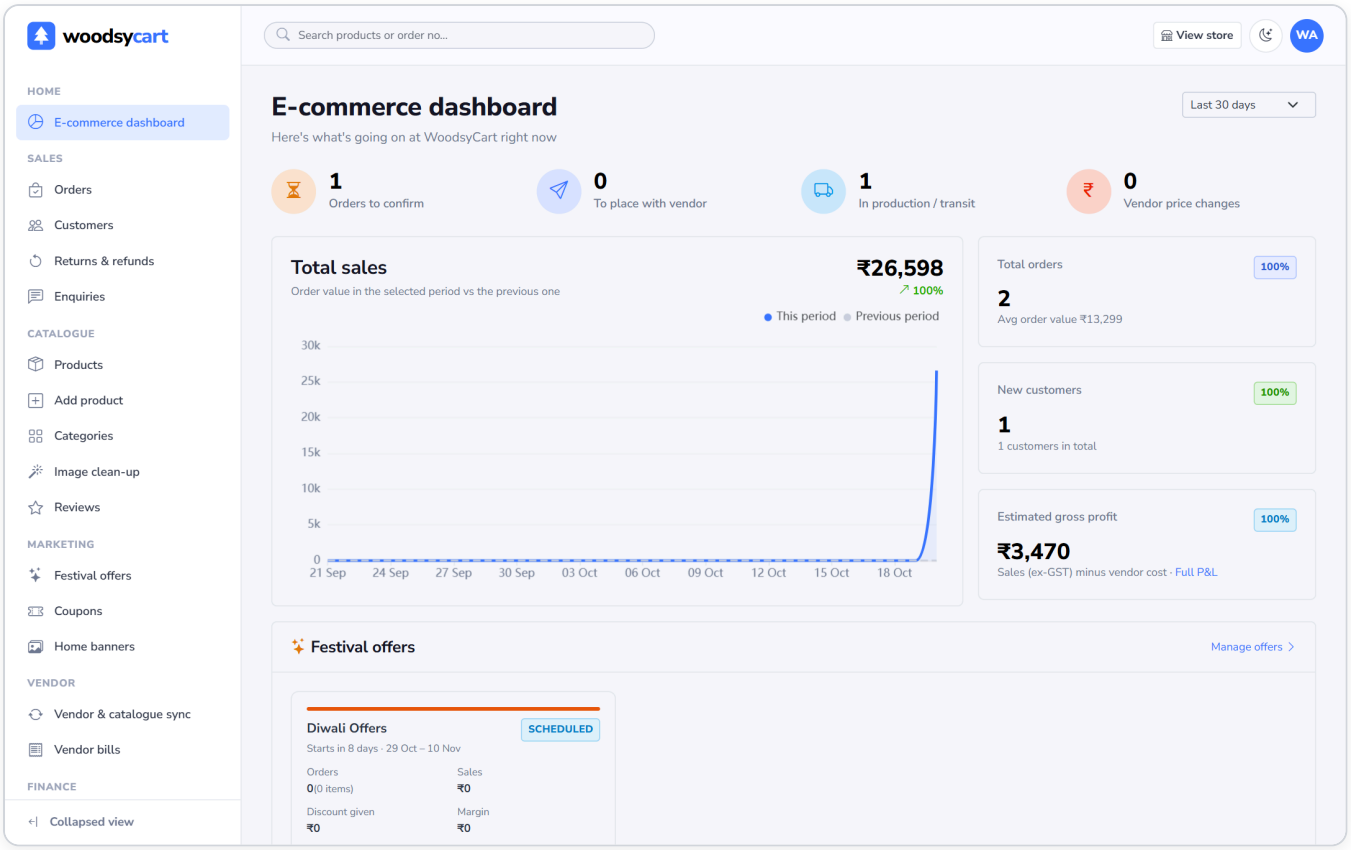

Open the Admin app in your browser (on the live server: `https://admin.woodsycart.com`). Enter your email and password and press **Sign in**.

Sign-in screen

- Only team members added under **Business settings** → **Team** can sign in. Customer accounts can't.
- You stay signed in for **12 hours**. After that you're asked to sign in again; nothing you saved is lost.
- Forgot your password? Ask another Admin to reset it in **Business settings** → **Team** (see 25.6).

1.2 The screen layout

Admin layout

Area	What it does
Left menu	All screens, grouped into Home, Sales, Catalogue, Marketing, Vendor, Finance and Settings. The screen you're on is highlighted.
Collapsed view (bottom of the menu)	Shrinks the menu to icons only, to give tables more room. Click again to expand.
Search box (top bar)	Type an order number (e.g. `WC2610200002`) and press Enter to search Orders; any other text searches Products.
View store	Opens the customer website in a new tab.
Moon / sun icon	Switches between light and dark mode. Your choice is remembered on this computer.
Round initials button	Your name and email, a shortcut to **Settings**, and **Sign out**.

On a phone, the menu is hidden behind the ☰ button at the top left.

1.3 Roles: Admin and Staff

There are two roles: **Admin** and **Staff**. At the moment **both roles can open and change every screen**. Give accounts only to people you trust, and switch an account off (**Active** off) as soon as someone leaves.

---

2. How WoodsyCart works — the big picture

WoodsyCart is a **drop-shipping** store. You don't keep stock. You sell the vendor's (GB Furniture's) products at your own price, and the vendor makes and delivers them to your customer.

2.1 The life of an order

```
Customer orders on woodsycart.com  ──►  Pays (UPI / card / …)
          │
          ▼
1. PENDING ── you check the order and payment ──► 2. CONFIRMED
          │
          ▼
3. PLACED WITH VENDOR ── you send it to the vendor on WhatsApp
          │                (a Purchase Order "PO" is created automatically)
          ▼
4. DISPATCHED ── the vendor has sent it (add tracking if any)
          │
          ▼
5. OUT FOR DELIVERY (optional)  ──►  6. DELIVERED
          │                                │
          │                                ├─ customer invoice is created automatically
          │                                └─ revenue now counts in Profit & loss
          ▼
Cancelled (before dispatch) · Returned (after delivery, via a refund)
```

2.2 How money flows

Money	Where you record it	Where it shows
Customer pays you	Automatically (UPI alert, gateway) or **Record payment** on the order	Order **Summary**, P&L **Cash position**
You owe the vendor	**Vendor bill** (from the vendor's invoice)	Vendor bills, P&L **Cost of goods**, **Payable**
You pay the vendor	**Pay** on the vendor bill	Vendor bills **Paid**, P&L **Paid to vendors**
Your running costs (ads, hosting…)	**Expenses**	P&L **Operating expenses**
Money returned to a customer	**Returns & refunds**	Order, P&L **Less: refunds**

2.3 Where the products come from

The **vendor sync** (chapter 18) copies the vendor's catalogue from their online store: products, options (size, colour…), variants, prices, stock and photos. Your **commission** is added on top to get your selling price. The sync runs automatically every day, and you can also run it any time.

---

3. Every calculation explained

This chapter explains every number the app calculates. The examples use your current settings: **15% commission**, **18% GST**, **vendor prices are before GST**, rounding **"End with 99"**.

3.1 Your cost (what you pay the vendor)

```
Your cost = Vendor price × (1 + GST %)
```

GB Furniture's website prices are **before GST**; they add 18% on their bill. So for a ₹10,000 product:

> ₹10,000 + 18% GST (₹1,800) = **your cost ₹11,800**

If a vendor's prices already include GST, switch on **Vendor prices already include GST** in **Business settings → Pricing**. Then *your cost = vendor price*.

3.2 Selling price (what the customer pays)

```
Selling price = Your cost × (1 + Commission %) → then rounded
```

> ₹11,800 × 1.15 = ₹13,570 → rounded "End with 99" → **₹13,599**

Which commission % is used? The first one that is set, in this order:

1. The product's own **Commission % (override)** (on the product page or **Set commission** in bulk)
2. The product's **category** commission (Categories screen)
3. The **Default commission %** (Business settings → Pricing)

Rounding options (Business settings → Pricing → Price rounding):

Option	₹13,570 becomes
End with 99	₹13,599 (next hundred minus 1)
Round up to ₹10	₹13,570
Round up to ₹100	₹13,600
No rounding	₹13,570

Products with options (variants): each variant (e.g. 6×5 ft, 6.5×5 ft) gets its own price the same way. The price shown on product cards is the **cheapest active variant**, with "From" in front of it.

Manual price: switch on **Set selling price manually** on a product to type your own price. Manual prices are never recalculated, not even when the vendor's price changes, so check them yourself.

3.3 MRP and "% off"

- **MRP** is the vendor's MRP converted the same way (vendor MRP × 1.18), and it's never shown lower than your selling price.
- **% off** on the store = (MRP − price) ÷ MRP × 100. Badges only show from 5% off (3% for the struck-through MRP).

3.4 Margin

```
Margin (₹) = Selling price − Your cost
Margin %   = Margin ÷ Selling price × 100
```

> ₹13,599 − ₹11,800 = **₹1,799** → 1,799 ÷ 13,599 = **13.2%**

On the Products list, a margin **below 8%** is shown in red, and **Low margin (<8%)** lists those products.

3.5 What happens when the vendor changes a price

During a sync, if the vendor's price changes:

1. The product's **vendor price** is updated, and the old one is kept as **was ₹...**.
2. Your **selling price is recalculated automatically** (unless it's a manual price).
3. The product is flagged **Vendor price changed** so you can review it. The dashboard shows how many.
4. On the Products list, select the reviewed products and press **Accept price change** to clear the flag.

3.6 Order totals (cart and checkout)

```
Items subtotal = sum of (price × quantity)            ← GST included in prices
− Coupon discount
+ Delivery fee        (0 if subtotal − coupon ≥ "Free delivery above ₹")
+ Pincode extra charge (from Delivery pincodes)
+ COD fee              (only for cash on delivery)
= Total
```

- **GST included** on an order is the GST *contained* in the total (prices include GST). It's only calculated when you're GST-registered.
- **Coupon %** is applied to the items subtotal, capped by the coupon's **Max discount** and rounded down to whole rupees.
- **Festival offer** savings are already inside the item prices (see 3.9). They're shown separately so you can see what the offer cost you.

3.7 The unique UPI amount (Direct UPI)

For Direct UPI orders the customer is asked to pay a slightly **smaller, unique amount**, e.g. **₹13,298.73** instead of ₹13,299. The few paise difference is a "fingerprint": when your bank's "credited ₹13,298.73" SMS arrives, the app knows exactly which order it belongs to and confirms it automatically. Differences of under ₹1 still count as fully paid.

3.8 Profit on an order (estimated vs actual)

Shown on each order (**Profit** card) and in Profit & loss:

```
Revenue (ex-GST) = Order total − GST included
Vendor cost      = vendor bill amount, if a bill is linked to the order (ACTUAL)
                   otherwise vendor price × quantity at order time (ESTIMATED)
Gross profit     = Revenue (ex-GST) − Vendor cost
```

- **Estimated** (yellow badge): no vendor bill yet; cost comes from the vendor's listed price.
- **Actual** (green badge): a vendor bill is linked; cost comes from the bill.
- When you're **not GST-registered**, the GST you pay the vendor can't be claimed back, so cost **includes** GST.
- When you're **GST-registered**, that GST is claimed back as input credit, so cost is **before** GST.

Est. margin on the Orders list is simpler: *order total − estimated vendor cost (incl. GST)*.

3.9 Festival offer price

```
Offer price = Regular price − discount (rounded down to whole ₹)
              but never below: Your cost × (1 + Minimum margin %)
```

> Regular ₹13,299, offer 10% off → ₹11,969. Cost ₹11,564 × 1.05 = ₹12,143 floor → offer price **₹12,143** (8.7% off).

If two offers cover the same product, the customer gets the **lower** price.

3.10 Dashboard figures

Figure	Calculation
Total sales	Sum of order totals (not cancelled) placed in the selected period
% change	Compared with the previous period of the same length (e.g. the 30 days before)
Total orders	Orders placed in the period (not cancelled)
Avg order value	Total sales ÷ Total orders
New customers	Customer accounts (including guests) created in the period
Estimated gross profit	(Item sales − coupons − GST) − vendor cost of those orders

3.11 Profit & loss figures

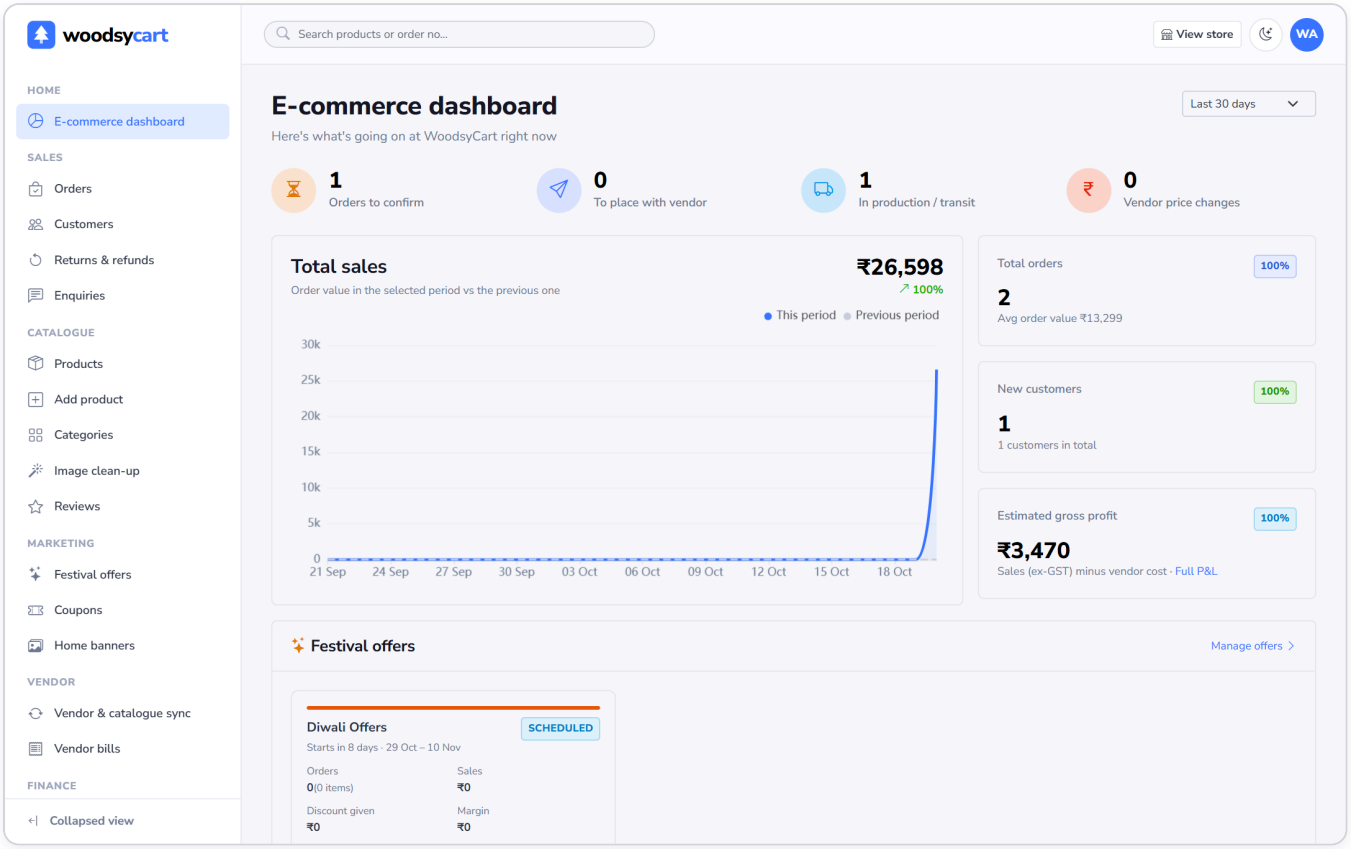

See chapter 20 for every line. In short:

```
Gross sales (delivered orders, incl. GST)
− GST collected (if GST-registered)
− Refunds processed
= Net revenue
− Cost of goods (vendor bills, or estimates)
= Gross profit
− Operating expenses
= NET PROFIT
```

---

4. Dashboard

Menu: Home → E-commerce dashboard. The first screen after signing in: a quick health check of the business.

Dashboard

Period selector (top right): **Last 7 days / 30 days / 90 days / 12 months**. Every figure on the page follows it, except **Needs your attention**, which always shows what is open right now.

4.1 Action strip (top row)

Four big tiles that take you straight to work:

Tile	Counts	Clicking opens
Orders to confirm	Orders in **Pending**	Orders → Pending
To place with vendor	Orders in **Confirmed** (paid/approved, not yet sent to the vendor)	Orders → Confirmed
In production / transit	Orders **With vendor**, **Dispatched** or **Out for delivery**	Orders in transit
Vendor price changes	Products whose vendor price changed and you haven't accepted yet	Products → Vendor price changed

4.2 Total sales chart

The solid line is this period's daily sales. The dashed grey line is the previous period, so you can compare. The % next to the total is the change between them.

4.3 KPI cards

Total orders, **New customers** and **Estimated gross profit**, each with the % change from the previous period. See 3.10 for how each is calculated. **Full P&L** opens Profit & loss.

4.4 Festival offers

Running, upcoming and recently ended (last 30 days) offers. Each one shows its status, timing ("Ends in 3 days"), **Orders**, **Sales**, **Discount given** and **Margin**. **Manage offers** opens Marketing → Festival offers.

4.5 Charts

Card	Shows
Sales by category	Which furniture categories earn the most (₹) in the period
Payment methods	How customers pay (UPI, card, COD…)
Order status	How many orders are at each stage

4.6 Latest orders

The 8 most recent orders. Click one to open it.

4.7 Needs your attention

Open jobs. Click any line to see the list:

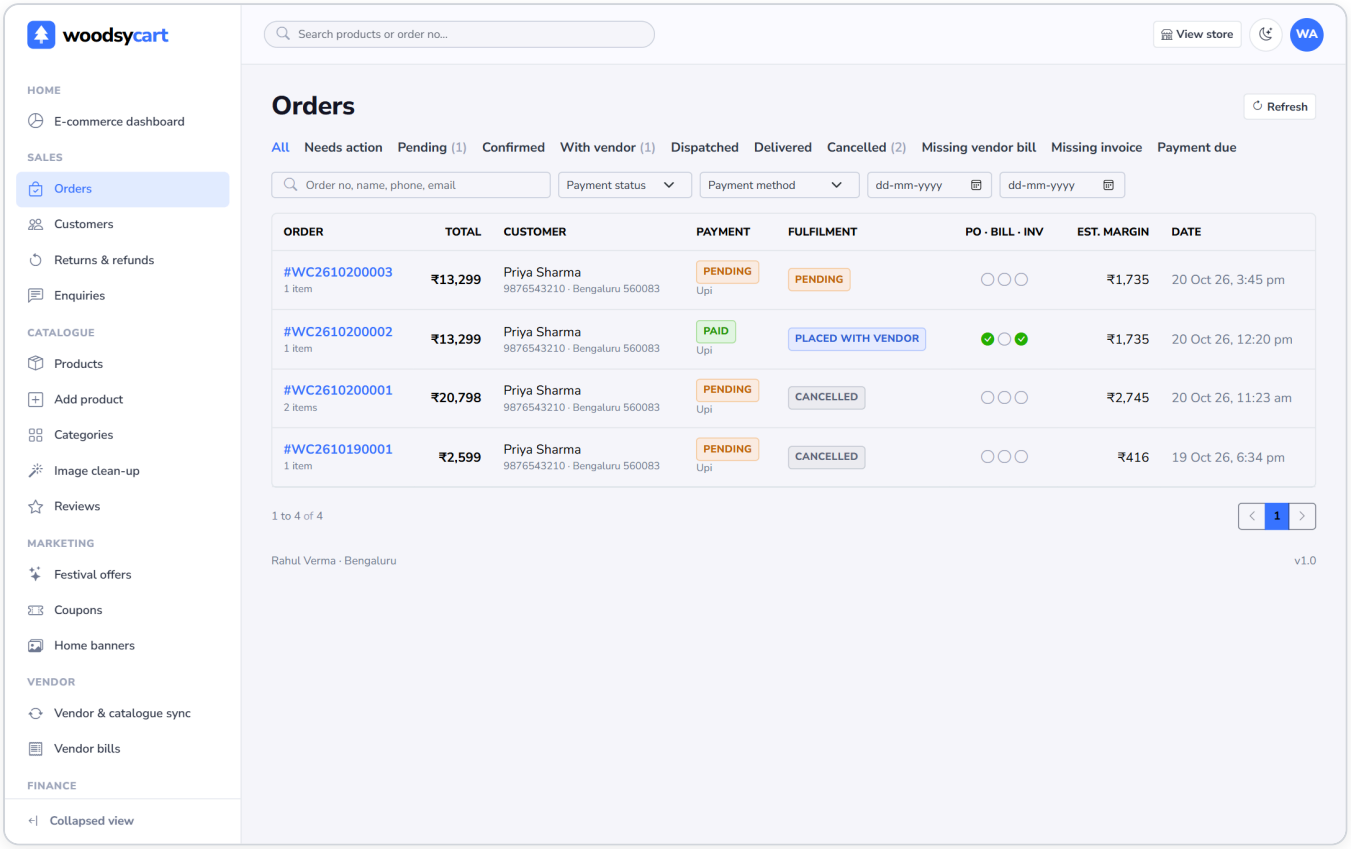

Line	Meaning	What to do
Unpaid vendor bills	Vendor bills not fully paid, and the total owed	Pay the vendor, then record it (chapter 19)
Delivered without invoice	Delivered orders with no customer invoice	Open the order → **Generate invoice**
Payment to collect	Delivered orders where the customer hasn't paid in full (usually COD)	Collect, then **Record payment**
Returns & refunds open	Refund requests not finished	Chapter 8
Out of stock at vendor	Published products the vendor marked unavailable	Unpublish them or wait for stock
New enquiries	Contact-form messages not yet handled	Chapter 9
Reviews to moderate	Customer reviews waiting for approval	Chapter 14

4.8 Top products and Top areas

The best-selling products (by ₹ and units), and the pincodes/areas ordering the most. Useful for deciding where to advertise.

5. Sales → Orders

Menu: Sales → Orders. Every order placed on the store.

Orders list

5.1 The tabs: when does an order appear in each?

Tab	An order appears here when...	It leaves when...
All	Always: every order	Never
Needs action	It's **Pending** or **Confirmed**, i.e. you must do something	You mark it placed with vendor (or cancel it)
Pending	The customer just placed it (or is still paying)	You mark it **Confirmed** or it's paid automatically
Confirmed	Payment received / you confirmed it	You mark it **Placed with vendor**
With vendor	You sent it to the vendor	You mark it **Dispatched**
Dispatched	The vendor shipped it	You mark it **Delivered** / **Out for delivery**
Delivered	Delivered to the customer	Only if it's later returned
Cancelled	Cancelled by you or the customer	Never
Missing vendor bill	It's with the vendor, dispatched or delivered, but no vendor bill is linked	You add the vendor bill

Tab	An order appears here when…	It leaves when…
Missing invoice	It's delivered but has no customer invoice	You generate the invoice
Payment due	It's delivered but not fully paid (usually COD)	You record the payment

The number in brackets after a tab is how many orders are in that status.

> **Tip:** Work through **Needs action** every morning, and **Missing vendor bill** / **Missing invoice** once a week. When all three are empty, your books are complete.

5.2 Filters

- **Search:** order number, customer name, phone or email.
- **Payment status:** Pending, Partially paid, Paid, Failed, Refunded.
- **Payment method:** UPI, Card, Net banking, Wallet, EMI, Bank transfer, Cash on delivery, or "Online (older orders)".
- **From / To dates:** when the order was placed.
- **Refresh:** reloads the list. New orders don't appear by themselves.

5.3 Columns

Column	Meaning
Order	Order number (e.g. `WC2610200002` = WoodsyCart, 2026-10-20, order no. 2 that day) and item count
Total	What the customer pays, all charges included
Customer	Delivery name, phone, city and pincode
Payment	Payment status (coloured) and method
Fulfilment	Order status
PO · Bill · Inv	Three circles: ✓ green = done, ○ grey = missing. **PO** = purchase order to vendor, **Bill** = vendor's bill entered, **Inv** = customer invoice created
Est. margin	Order total − estimated vendor cost (incl. GST). Red if negative
Date	When it was placed

Click any row to open the order.

5.4 New order (Instagram, WhatsApp, Facebook, phone, walk-in)

Press **New order** (top right of Orders) for an order you took outside the website. It becomes a normal order with the same number series, purchase order, invoice, profit and reports.

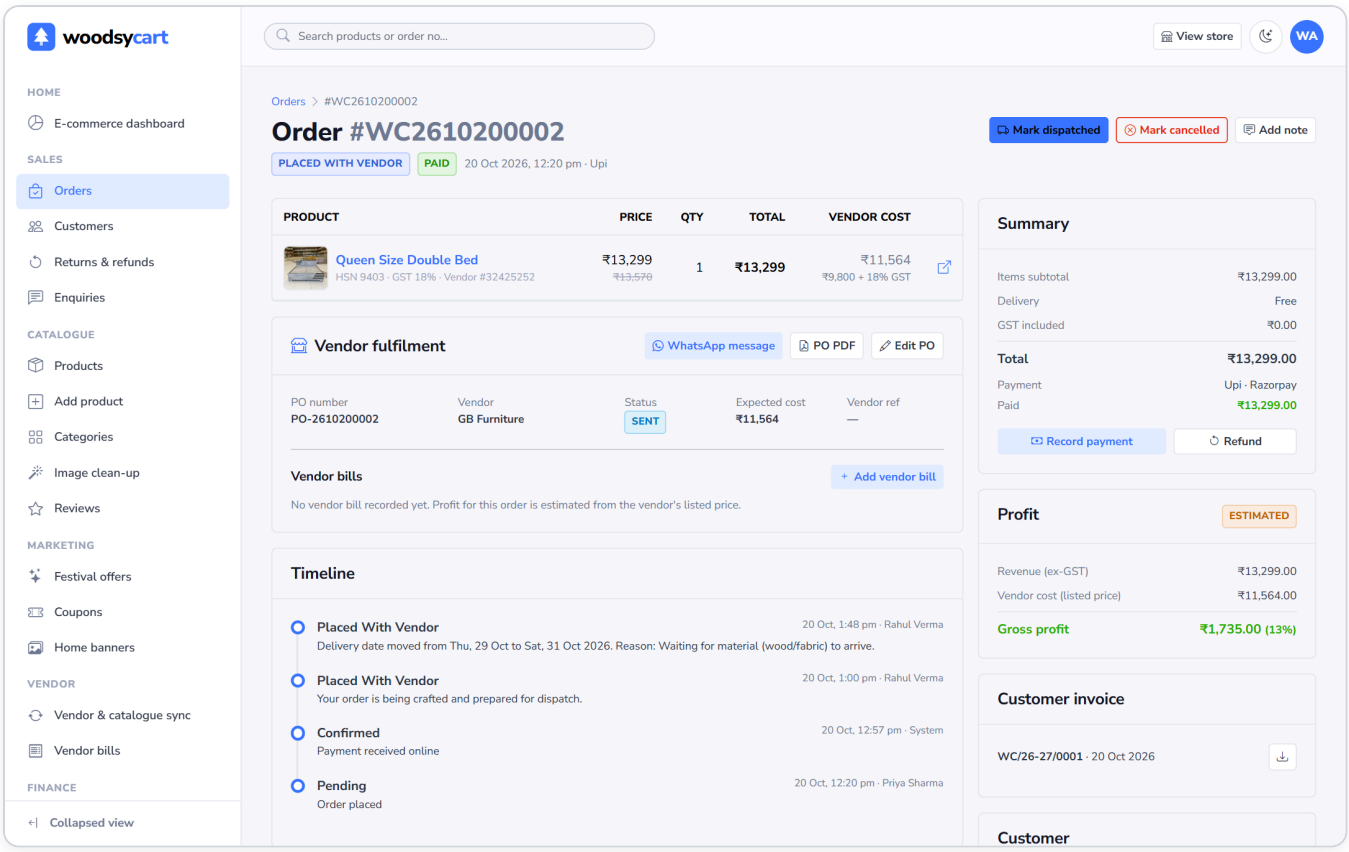

1. **Where did this order come from?** Instagram, WhatsApp, Facebook, Phone call, Walk-in / showroom or Other, plus an optional **reference** (e.g. the Instagram @handle or chat link).

2. **Customer:** search an existing customer by mobile, name or email (the last delivery address fills in), or type a new one. **Email is optional**; customers without email are kept by their **mobile number**. The pincode is checked just like at checkout.
3. **Products:** search and add products, choose the size/colour, set the quantity. The **price fills in from the store** (including any live festival offer). Type a different price for a negotiated deal; it turns red and you get a warning if it's **below your cost**. **Store price** puts it back.
4. **Summary:** items, **Discount ₹**, **Delivery ₹** (the usual fee fills in; **use usual fee** resets it), **Total**, **Vendor cost** and **Your margin**.
5. **Payment:**
    - **Paid in full:** choose how (UPI, bank transfer, cash, card) and add the UTR/reference. The order is created as **Confirmed** and **Paid**.
    - **Advance received:** enter the advance. The order shows **Partially paid** with the balance due.
    - **Send a payment link:** the customer pays from their order page (Direct UPI, confirmed automatically). Needs Direct UPI set up in Payment integrations.
    - **Cash on delivery:** collected when delivered.
6. Optional **Expected delivery** date, a **note for the customer**, an **internal note** and the customer's **GSTIN**.
7. **Create order:** the confirmation shows a ready-made message (items, total, delivery date, payment and tracking link). **Send on WhatsApp** opens the customer's chat with it; **Copy message** copies it.

Every order shows its channel (icon on the Orders list, badge on the order page) and who entered it. Use the **All channels** filter on Orders, the **Sales by channel** card on the dashboard, and the Channel column in the P&L export to see which platform sells most. **Message customer** on any order page opens WhatsApp with the same summary.

---

6. Sales → Order details (one order)

Order details

6.1 Header

- **Order #…** with its **status** and **payment status** badges, the date and the payment method.
- **Action buttons:** only the next sensible steps are offered:

Current status	Buttons shown
Pending	**Mark confirmed**, **Mark cancelled**
Confirmed	**Mark placed with vendor**, **Mark cancelled**
Placed with vendor	**Mark dispatched**, **Mark cancelled**
Dispatched	**Mark out for delivery**, **Mark delivered**
Out for delivery	**Mark delivered**
Delivered	**Mark returned**

- **Message customer:** opens WhatsApp with the order summary, payment and tracking link for the customer.
- **Add note:** adds a message to the timeline. Tick **Visible to customer** to show it on their order page; otherwise it's internal.

6.2 Updating the status (the status window)

Clicking a status button opens a small window:

- **Message:** what the customer sees on their order timeline and in the email. Leave it empty for a sensible default, e.g. "*Your order has been dispatched.*"
- **Visible to customer:** ticked = the customer sees it and gets an email. Untick for internal steps.
- **Dispatched only: Courier / transporter**, **Tracking / LR no.** and **Expected delivery** date.
- **Delivered only: Balance … was collected on delivery** appears when money is still due; tick it to record the cash payment.
- **Cancelled:** the message becomes the **cancellation reason**. If the customer had paid, a refund is created automatically (see chapter 8).

What happens automatically:

You mark…	The app also…
Placed with vendor	Creates the **Purchase Order** (PO-…) if there isn't one
Dispatched	Sets the PO to Dispatched
Delivered	Records the delivery time, adds the sale to "units sold", sets the PO to Delivered, **creates the customer invoice**, and the revenue starts counting in Profit & loss
Cancelled	Gives the coupon use back, creates a refund if money was paid, and emails the customer

6.3 Items

Each product with its option (e.g. "6x5ft Marble"), HSN code, GST %, vendor item number, **Price** (with MRP struck through), **Qty**, **Total**, and **Vendor cost**: what you pay the vendor for that line, *including GST* (the line below shows "vendor price + GST"). The ↗ icon opens the product on the vendor's website.

6.4 Vendor fulfilment

Everything about getting the order made by the vendor.

- **WhatsApp message:** builds a ready-to-send message for the vendor: items (using the *vendor's* own names for sizes and colours), your price to them, links, and the customer's delivery address. **Open WhatsApp** opens the vendor's chat with it filled in; **Copy** copies it.
- **PO PDF:** a printable Purchase Order to send the vendor.
- **Create PO / Edit PO:** the purchase order details:
  - **Vendor**, **Status** (Draft, Sent, Accepted, Dispatched, Delivered, Cancelled)
  - **Agreed cost (₹):** what the vendor will charge for this order
  - **Vendor order ref:** the vendor's own order number
  - **Expected dispatch:** when the vendor said they'd send it
  - **Notes for vendor**
- **Vendor bills:** bills from the vendor for this order. **Add vendor bill** opens the bill form, already filled in with the expected amounts:
  - **Taxable value** = vendor prices × quantities; **GST**; **Delivery charges**; **Bill total** = the three added up

- **Attach bill (PDF / photo):** keep a copy of the vendor's invoice
- Once a bill is linked, the order's profit becomes **Actual** (see 3.8).

6.5 Timeline

Every step in order, with time, who did it, and the message. Entries marked **Internal** are only visible to your team. Customers see the others on their order page.

6.6 Summary (right side)

Line	Meaning
Items subtotal	Sum of item totals (GST included)
Discount (CODE)	Coupon discount
Delivery	Delivery fee, or Free
COD fee	Extra charge for cash on delivery
GST included	GST contained in the total (0 if not GST-registered)
Total	What the customer pays
Payment	Method · provider (e.g. UPI · Direct UPI)
UPI amount to receive	The unique amount the customer was asked to pay (see 3.7)
Customer's UTR	The UPI reference the customer typed after paying
Paid	Money received so far
Balance due	Total − Paid (shown in red when money is still due)

- **Payments received:** every payment on the order: method (e.g. *Razorpay · Net banking · Bank of Baroda*), amount, date and time, the bank's reference, the gateway payment id and the **gateway fee**. For gateway payments these details come from the gateway itself.
- **Record payment:** only for money the app couldn't see by itself: cash on delivery, a bank transfer, a UPI payment whose SMS never arrived, an advance or part payment, an extra charge. **Never for gateway (Razorpay) payments**; those are recorded automatically.
  - The form fills itself in: **Amount** = balance due, **Method** = how the customer paid, **Reference** = the UTR the customer gave.
  - Always enter the **full amount the customer paid**, not what reached your bank after fees.
  - If the order is already fully paid, the form says so and won't save an empty amount.
  - The payment status becomes **Paid** when the full total is received, or **Partially paid** otherwise.
- **Refund:** appears once money has been received; creates a refund (chapter 8).

6.7 Profit

Revenue (ex-GST), **Vendor cost** (bill or listed price), **Gross profit** and margin %, with an **Actual / Estimated** badge. See 3.8.

6.8 Customer invoice

The invoice is created automatically when you mark the order **Delivered**. **Generate invoice** creates it earlier if a customer needs it before delivery. ⬇ downloads the PDF. Invoices are cancelled from Finance → Customer invoices.

6.9 Customer card and Delivery date

- The customer's name (click for their profile), email, phone, delivery address, GSTIN if given, tracking details and the customer's own **note**.
- **Open the pinned location in Google Maps** when the customer pinned their location on the map (otherwise **Find the address in Google Maps**).
- **Delivery date** shows the expected date, and **Change** / **Set** updates it:
  - Pick the **New expected date** (not in the past).
  - Choose a quick **reason** (vendor needs more time, transport delay, festival/holiday, heavy rain, waiting for material) or write your own. A reason is **required** when the date moves later.
  - **Email the customer** (on by default) sends them an apology email with the old and new dates and the reason.
  - The customer's order and tracking page shows "*New expected delivery … originally expected on …*" with the reason.
  - After a change, the card shows **Originally promised …** and **Reason given …**.

6.10 Internal notes

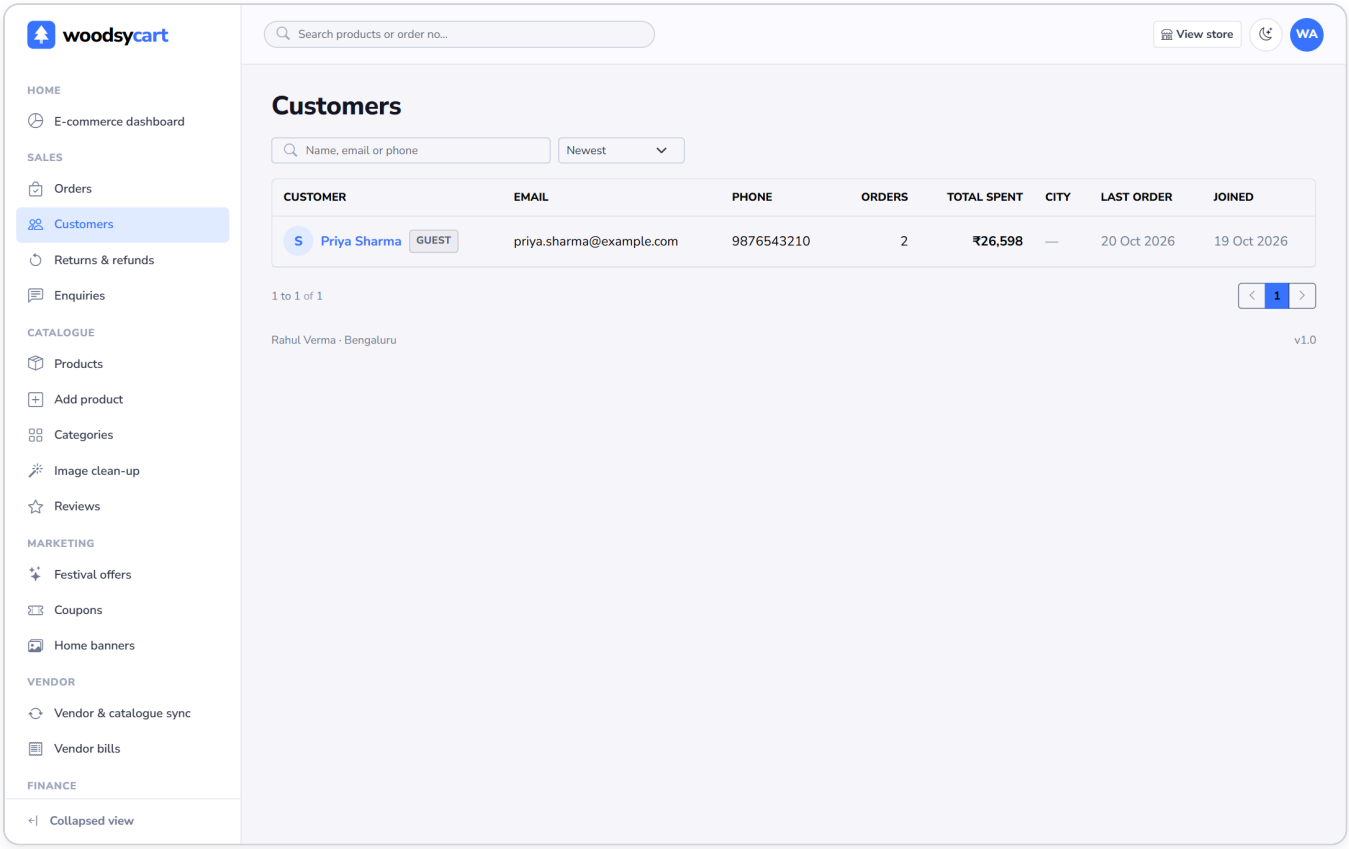

Free-text notes only your team sees (for example "customer prefers delivery after 6 pm"). Press **Save notes**.

> **Watch out:** furniture is made to order. If you cancel after placing the order with the vendor, the vendor may still charge you. Confirm with the vendor first.

---

7. Sales → Customers

Menu: Sales → Customers.

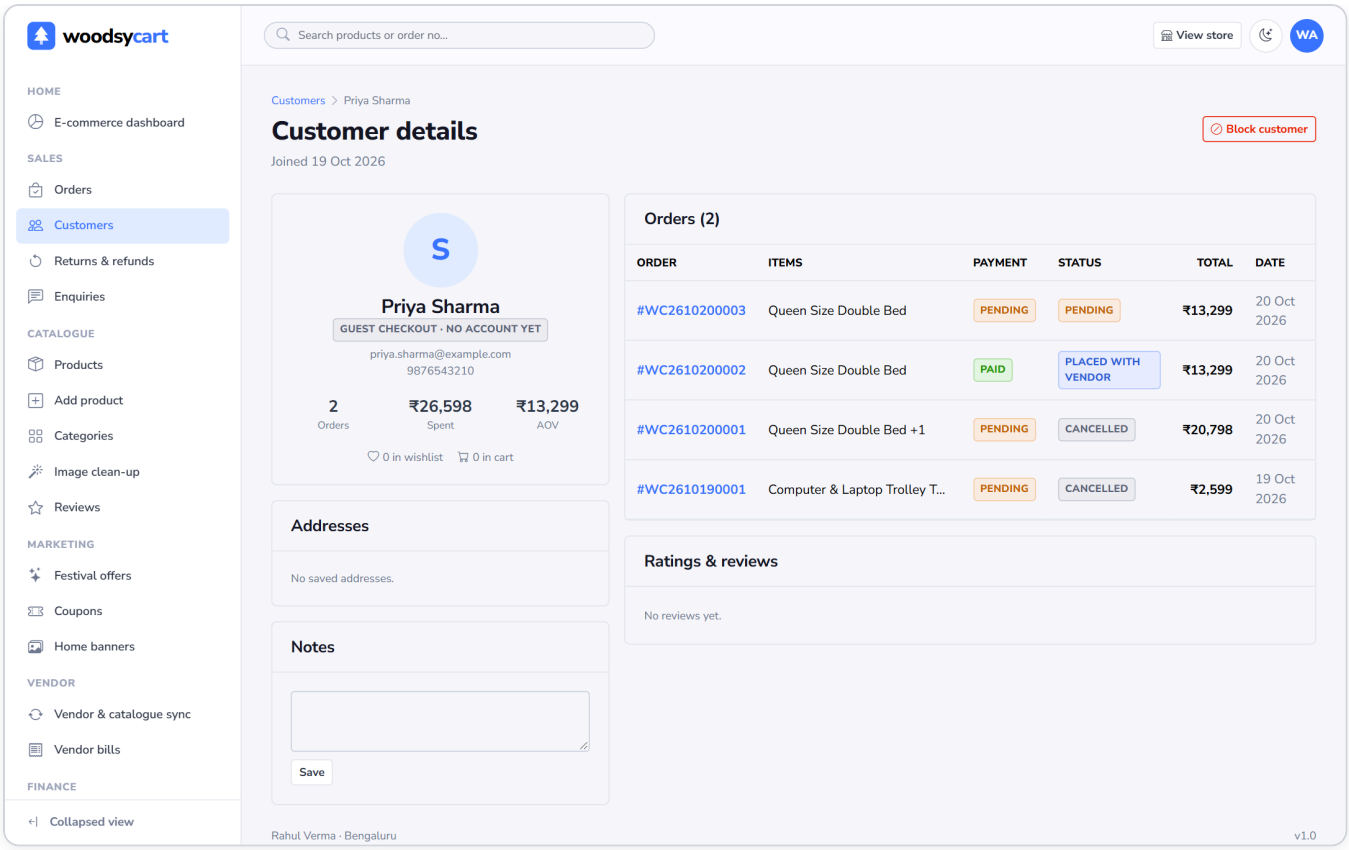

Customers

List: search by name, email or phone; sort by **Newest**, **Top spenders**, **Most orders** or **Recent buyers**. Columns: **Orders**, **Total spent** (non-cancelled orders), **City**, **Last order**, **Joined**.

- **Guest** badge: the person bought without creating an account (guest checkout). If they later register with the same email, their old orders join their account.
- **Blocked** badge: the customer can't sign in or order.

Customer details:

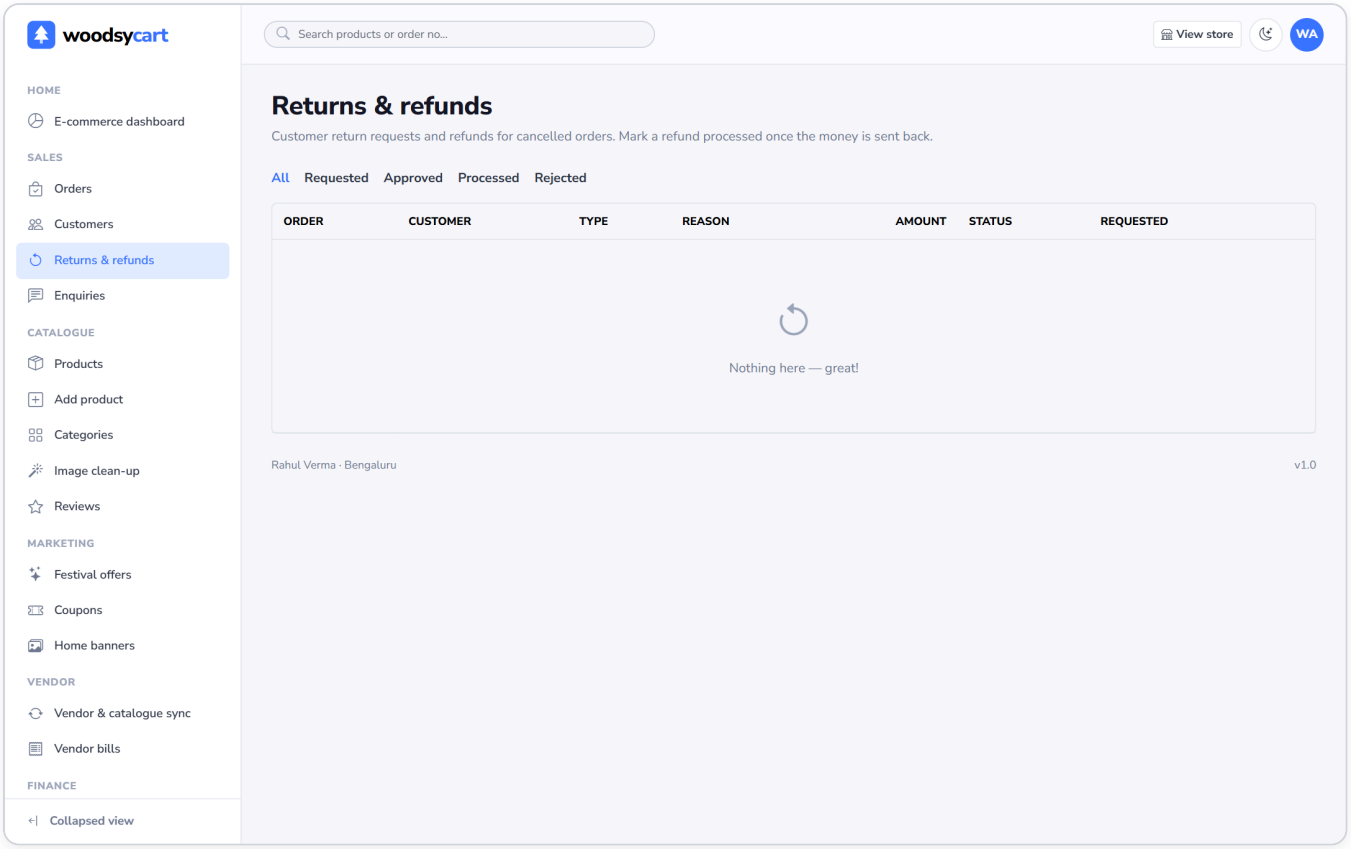

Customer details

- **Orders / Spent / AOV** (average order value = spent ÷ orders), items in their **wishlist** and **cart**.
- **Addresses** they saved, **Notes** (internal), their **Orders** list and **Ratings & reviews**.
- **Block customer / Unblock customer:** use for fraud or abuse only.

---

8. Sales → Returns & refunds

Menu: Sales → Returns & refunds.

Returns and refunds

8.1 When does a refund appear here?

Type	Created when...	Starts as
Cancellation	A paid order is cancelled (by you or the customer)	Approved
Return	The customer asks to return a delivered order (within **7 days** of delivery)	Requested
Partial	You press **Refund** on an order (e.g. a small damage compensation)	Approved

8.2 Tabs and statuses

All / Requested / Approved / Processed / Rejected.

- **Requested:** the customer asked; you must decide.
- **Approved:** agreed, but the money hasn't been sent yet.
- **Processed:** the money has been sent back. Final.
- **Rejected:** declined. Final.

8.3 Processing a refund

Press **Update** → set **Status** and **Amount**, enter the **Refund reference / UTR** of your bank or UPI transfer, add **Notes** → **Save**.

When you set **Processed**:

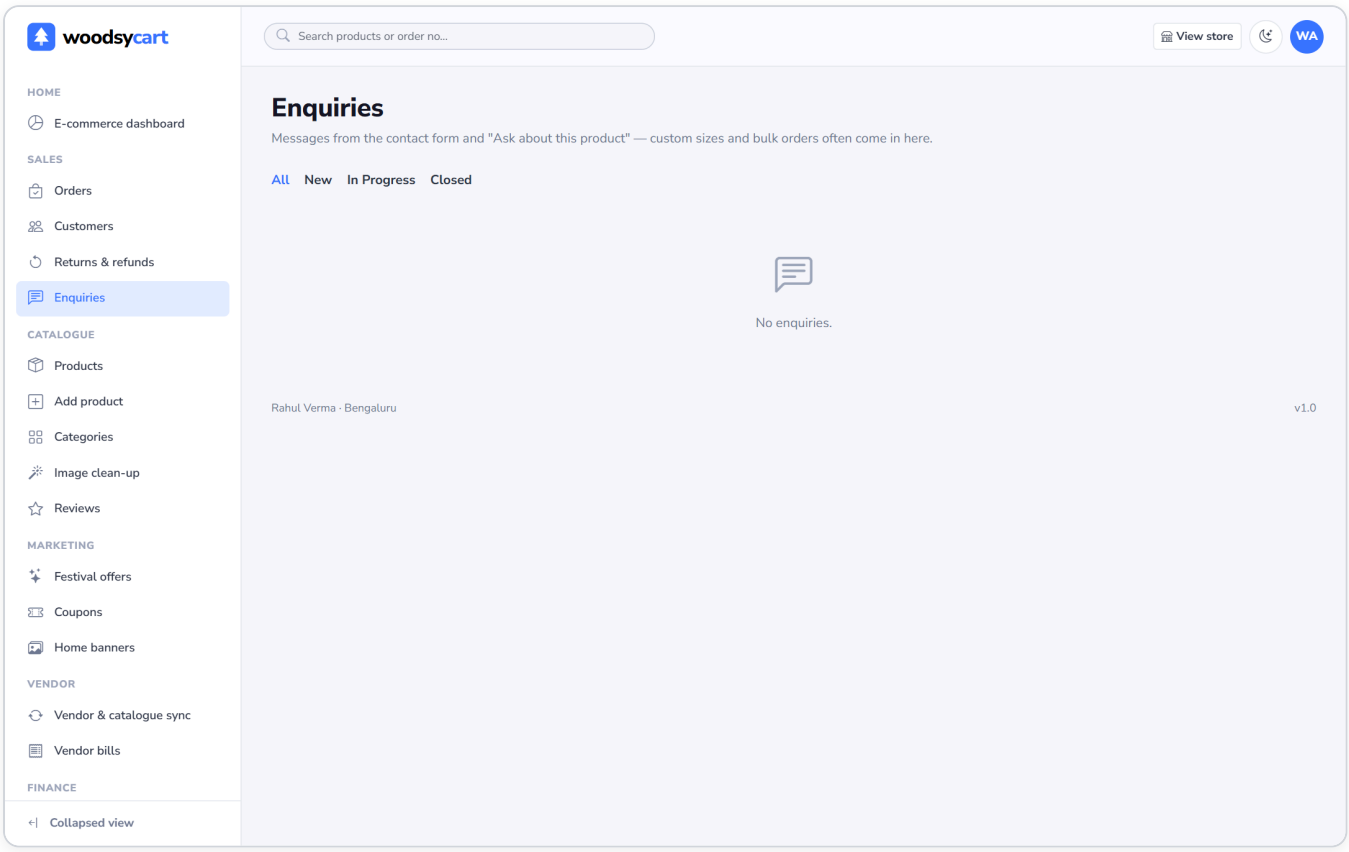

- The order's payment status becomes **Refunded** (full) or **Partially refunded**.
- For a **Return**, the order status becomes **Returned**.
- A timeline entry is added and the customer is emailed.
- The amount appears under **Less: refunds** in Profit & loss.

> **Tip:** for card / net-banking orders paid through a gateway, issue the refund from the gateway's dashboard first, then paste its refund id here.

---

9. Sales → Enquiries

Menu: Sales → Enquiries. Messages from the store's **Contact** page and the **Ask about this product** button. Custom sizes and bulk orders usually come in here.

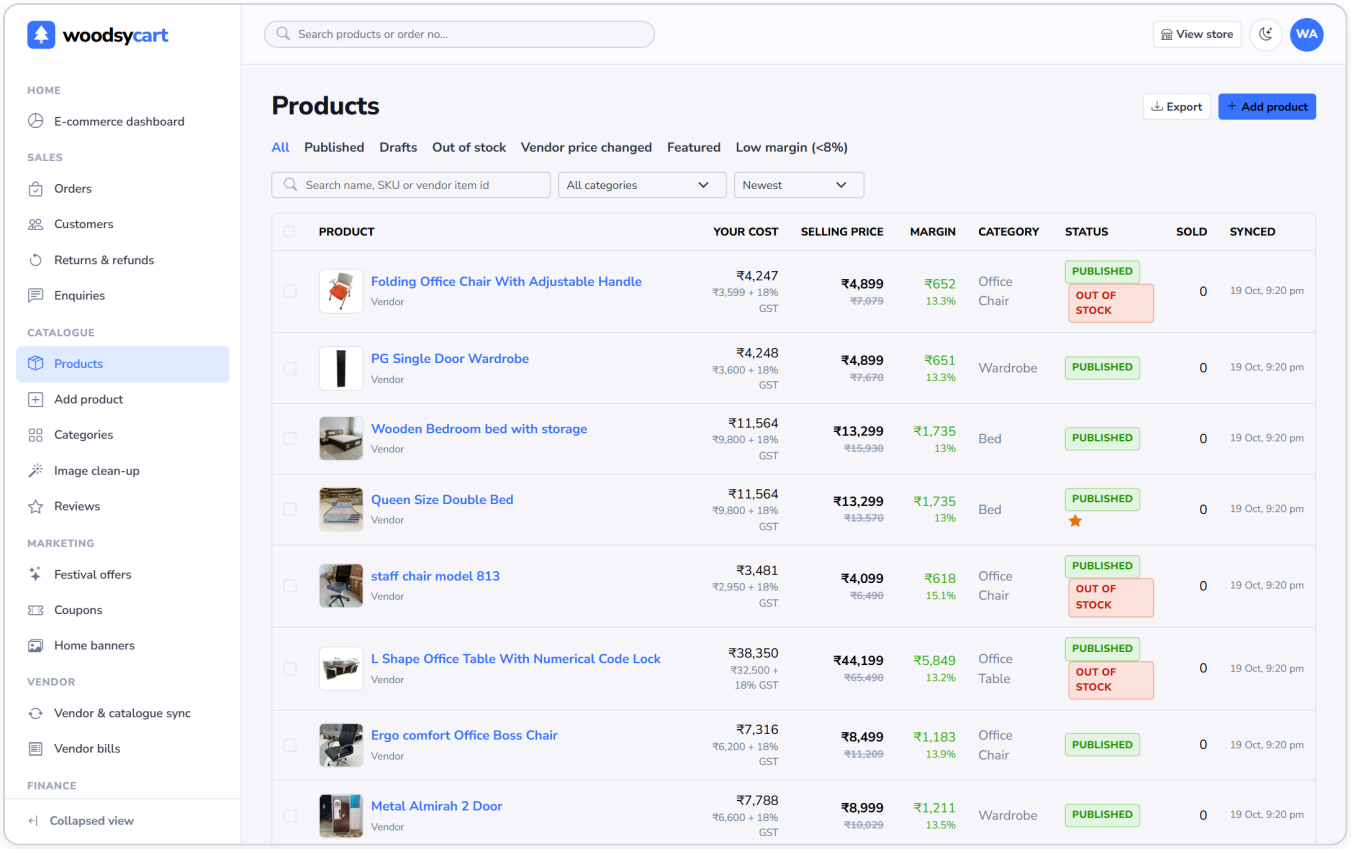

Enquiries

- Tabs: **All / New / In progress / Closed**.
- Each card shows the name, phone, email, product (if asked from a product page), the message and the time.
- Type **Notes**, change the status, then **Save**. The green WhatsApp button opens a chat with the customer.

10. Catalogue → Products

Menu: Catalogue → Products.

Products

10.1 Tabs

Tab	Shows
All	Every product (except deleted ones)
Published	Visible on the store
Drafts	Hidden from the store (new vendor products when "Publish new products" is off, products only sold in other cities, or ones you unpublished)
Out of stock	The vendor marked them unavailable
Vendor price changed	The vendor's price changed and you haven't accepted it yet (see 3.5)
Featured	Marked ★ featured (shown in "Best sellers" on the home page)
Low margin (<8%)	Margin below 8% of the selling price

10.2 Search, filter and sort

Search by **name, SKU or vendor item id**; filter by category; sort by **Newest, Name, Price ↑, Price ↓, Lowest margin, Best selling**.

10.3 Columns

Column	Meaning
Product	Name, number of variants, **Vendor** or **Manual** source, and the commission override if set
Your cost	Vendor price + GST (the small line shows the split); **was ₹…** in red when the vendor's price changed
Selling price	Your price (MRP struck through)
Margin	₹ and %: green from 8%, red below
Category	The product's category
Status	**Published** / **Draft**, **Out of stock**, ★ featured
Sold	Units delivered so far
Synced	Last time the vendor sync updated it

10.4 Bulk actions

Tick products (or the box in the header for the whole page) and a toolbar appears:

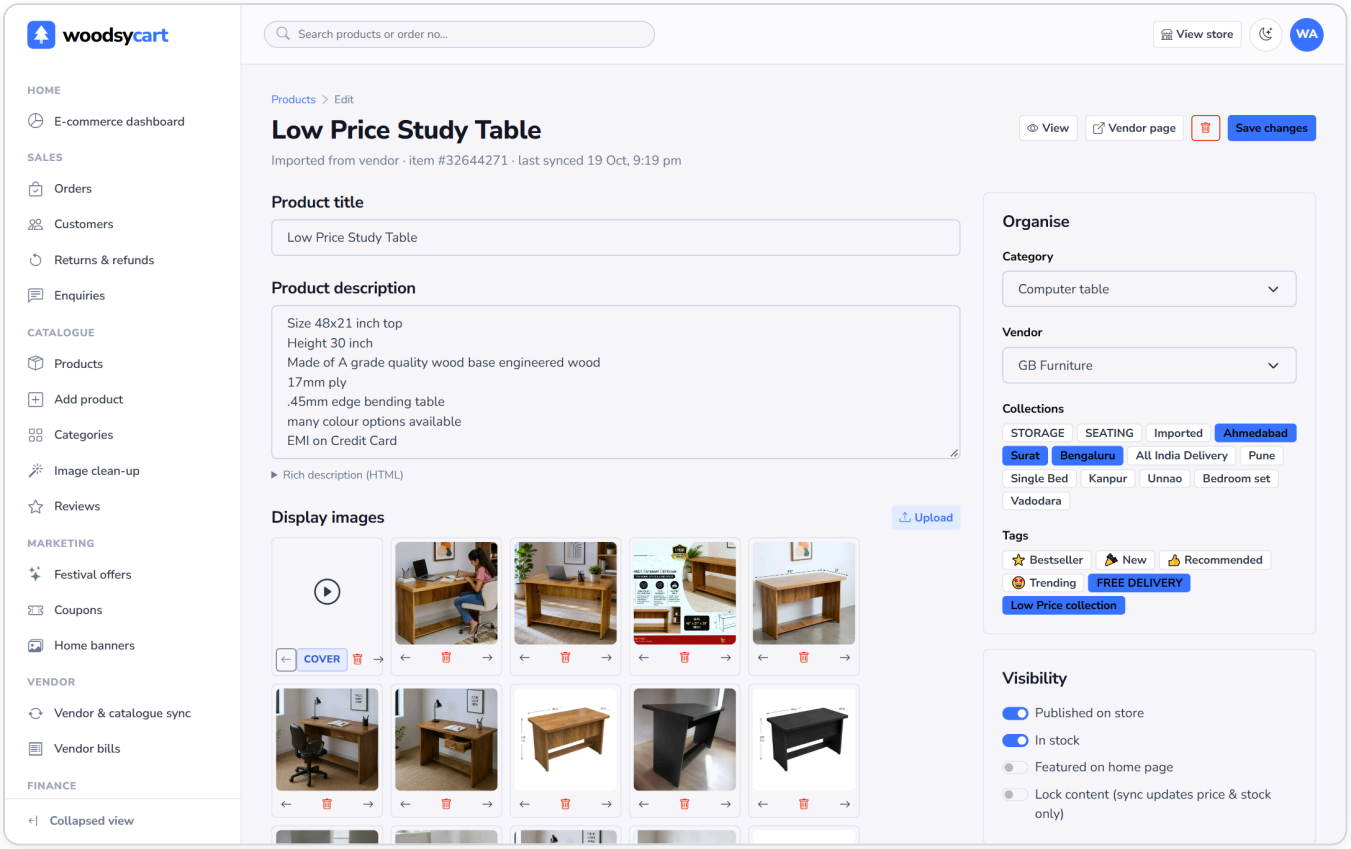

- **Publish / Unpublish / Feature**
- **Accept price change:** clears the "vendor price changed" flag
- **Set commission:** a commission % for the selected products (empty = use the category/default); prices are recalculated
- **Set GST %:** 0, 5, 12, 18 or 28%; costs and prices are recalculated
- **Delete:** removes them from the store and lists (order history is kept)

Export downloads all products as a spreadsheet (CSV) with costs, prices and margins.

---

11. Catalogue → Add / edit a product

*Click a product, or **Add product**.*

Product edit

11.1 Top of the page

- For vendor products, the subtitle shows "*Imported from vendor · item #… · last synced …*".
- **View** opens it on the store; **Vendor page** opens it on the vendor's website; 🗑 deletes it.
- **Save changes** (or **Publish product** for a new one).
- A yellow banner appears when **the vendor changed the price**, showing the old and new price.

11.2 Title, description and images

- **Product title** and **Product description** (one highlight per line; they're shown as bullet points). **Rich description (HTML)** is optional formatted text.
- **Display images: Upload** photos or MP4 videos. The first image is the **Cover**. Use ← → to reorder, 🗑 to delete. **Variant** marks photos that belong to one option (e.g. one colour).
- Uploaded and synced photos are automatically cleaned of vendor names (chapter 13).

11.3 Pricing tab

Field	Meaning
Vendor MRP (₹)	The vendor's MRP (used for the struck-through price)

Field	Meaning
Vendor price (₹)	The vendor's selling price to you (before GST for GB Furniture)
GST %	The product's GST rate
Cost line	"Vendor price + 18% GST = **your cost**"
Commission % (override)	Leave empty to use the category/default; "Currently applied: X%" shows what's used
Set selling price manually	Turn on to type **MRP shown** and **Selling price** yourself
Price preview	**Selling price**, **MRP shown**, **Your margin**
Variants table	Each option combination: vendor price, price, **In stock**, **Active**. Vendor variant names can't be edited here; use the **Options & colours** tab

11.4 Options & colours tab

Lets you change the options customers choose from (Size, Colour…). See the full explanation in 11.8.

11.5 Furniture details tab

Material, **Dimensions**, **Warranty**, **Delivery (days)**, **Free assembly**, **SKU**, **HSN code** (for invoices; furniture is usually 9403), **Brand shown**. These appear on the product page and invoices.

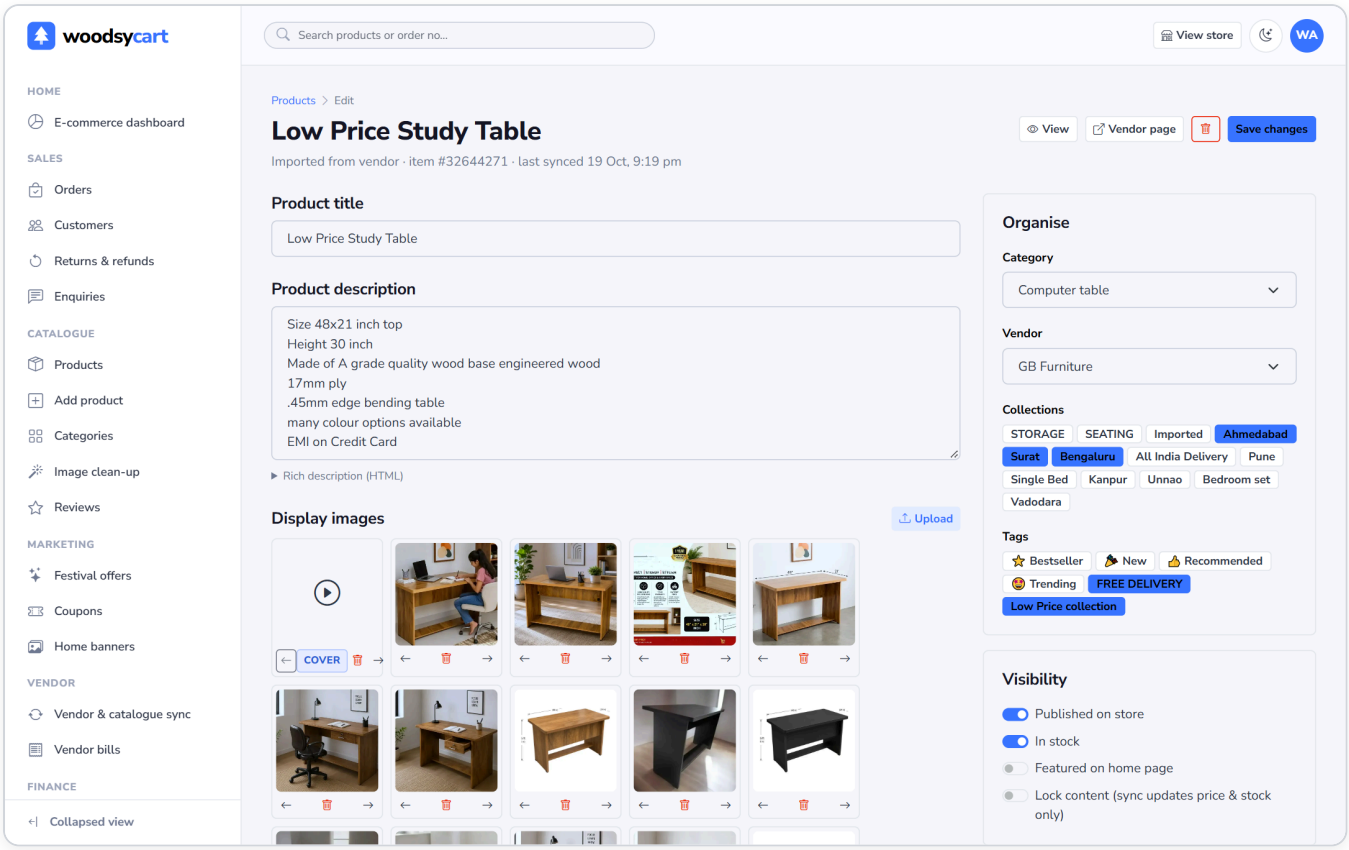

11.6 SEO tab

URL slug (the web address, e.g. `/product/queen-size-double-bed`), **Meta title** and **Meta description** (what Google shows). Leave them empty to use the product name.

11.7 Right side

- **Organise: Category**, **Vendor**, **Collections**, **Tags** (e.g. "⭐ Bestseller").
- **Visibility:**
  - **Published on store:** visible to customers.
  - **In stock:** can be ordered.
  - **Featured on home page.**
  - **Lock content** (vendor products): the sync only updates price and stock, never your title, description or photos. Turn it on once you've rewritten a product.
- **Performance:** units sold and rating.

11.8 Options & colours in detail

Options and colours

Colours and names start **exactly as the vendor sends them**. Everything you change here is **kept when the vendor syncs**, and new colours the vendor adds still appear automatically.

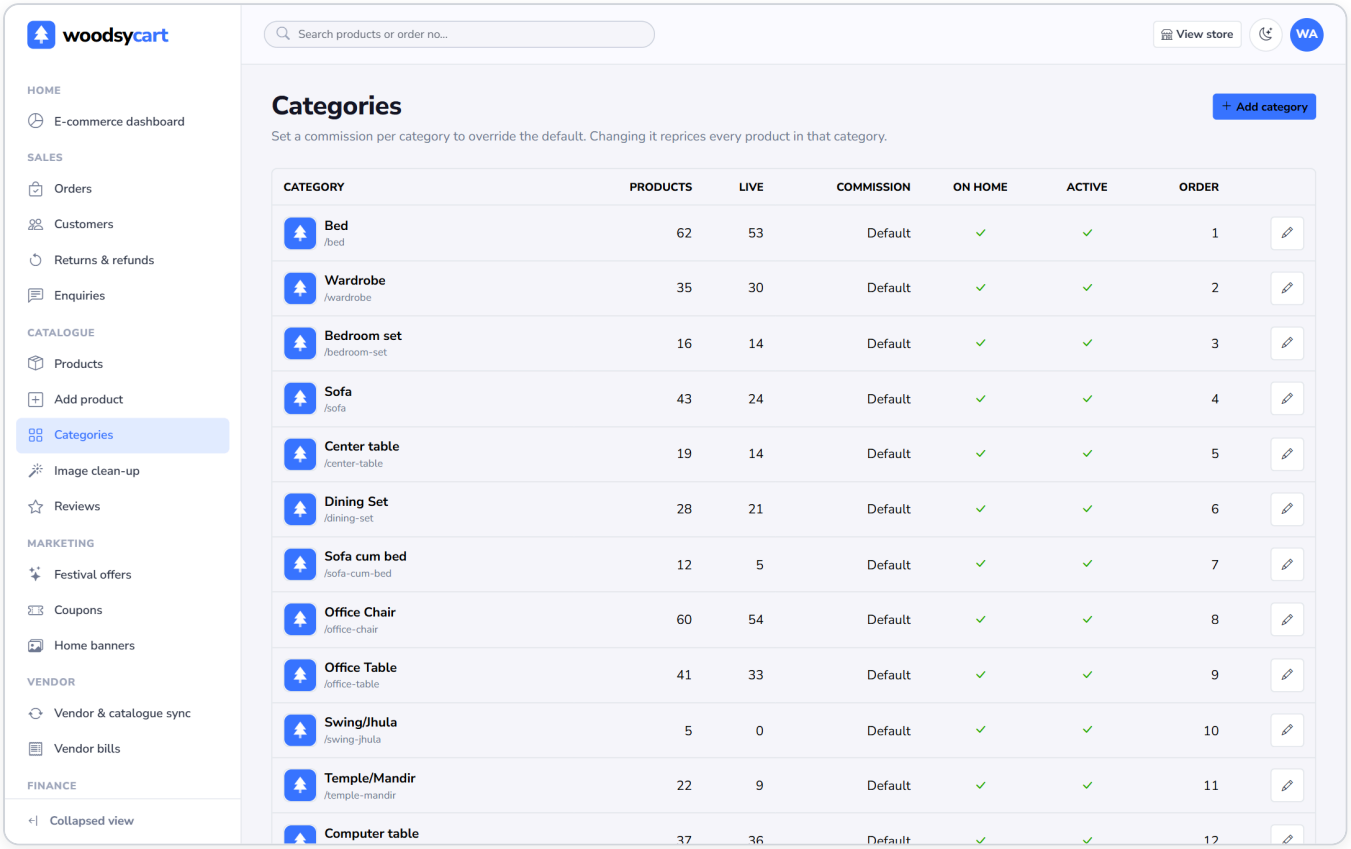

- **Option name:** rename it (e.g. the vendor's "Name of Colour" → "Colour"). The note "*From the vendor as …*" shows the original name.
- **Colour swatches:** shows the values as coloured circles on the store and includes them in the colour filter.
- **Each value:**
  - Click the circle (or type a #code) to set its colour, and edit its name.
  - **Vendor: Junglewood ● #574211** shows the vendor's original; **use vendor's** puts it back.
  - **N variants** = how many sellable combinations use this value.
  - ▲▼ change the order customers see.
- **Remove (×):**
  - A colour **you added** is deleted.
  - A **vendor** colour is **hidden** instead, so the next sync doesn't bring it back. **Restore** shows it again.
  - Removing a value switches off its variants.
- **Add a value:** type the name, pick the colour, choose **Price like …** (an existing value to copy prices from), then **Add**. The new colour's prices keep following that vendor colour's price automatically.
- **Add option:** e.g. add Colour to a product that has none. Every current variant gets the first value; each further value becomes a copy with the same prices.
- **Save options** saves; **Discard** cancels.

Watch out: for a colour you added yourself, tell the vendor exactly what to make. The WhatsApp message and PO already say "… — *but Colour: Walnut*".

---

12. Catalogue → Categories & collections

Menu: Catalogue → Categories.

Categories

Categories table: Products (total), **Live** (published), **Commission** (or Default), **On home** (shown on the home page), **Active**, **Order** (position).

Add / edit category: Name, **Sort order**, **URL slug**, **Commission % override** (reprices all its products when saved), **Description**, **Image** (otherwise the cover of its best product is used), **Active**, **Show on home page**. A category with no products can be deleted.

Collections (below): groups imported from the vendor, many of which are vendor city branches (Ahmedabad, Surat, Bengaluru…). Switch **Visible** off for the ones customers shouldn't filter by.

13. Catalogue → Image clean-up

Menu: Catalogue → Image clean-up. Removes the vendor's name, website, phone numbers and prices printed on product photos, and keeps dimensions and model codes.

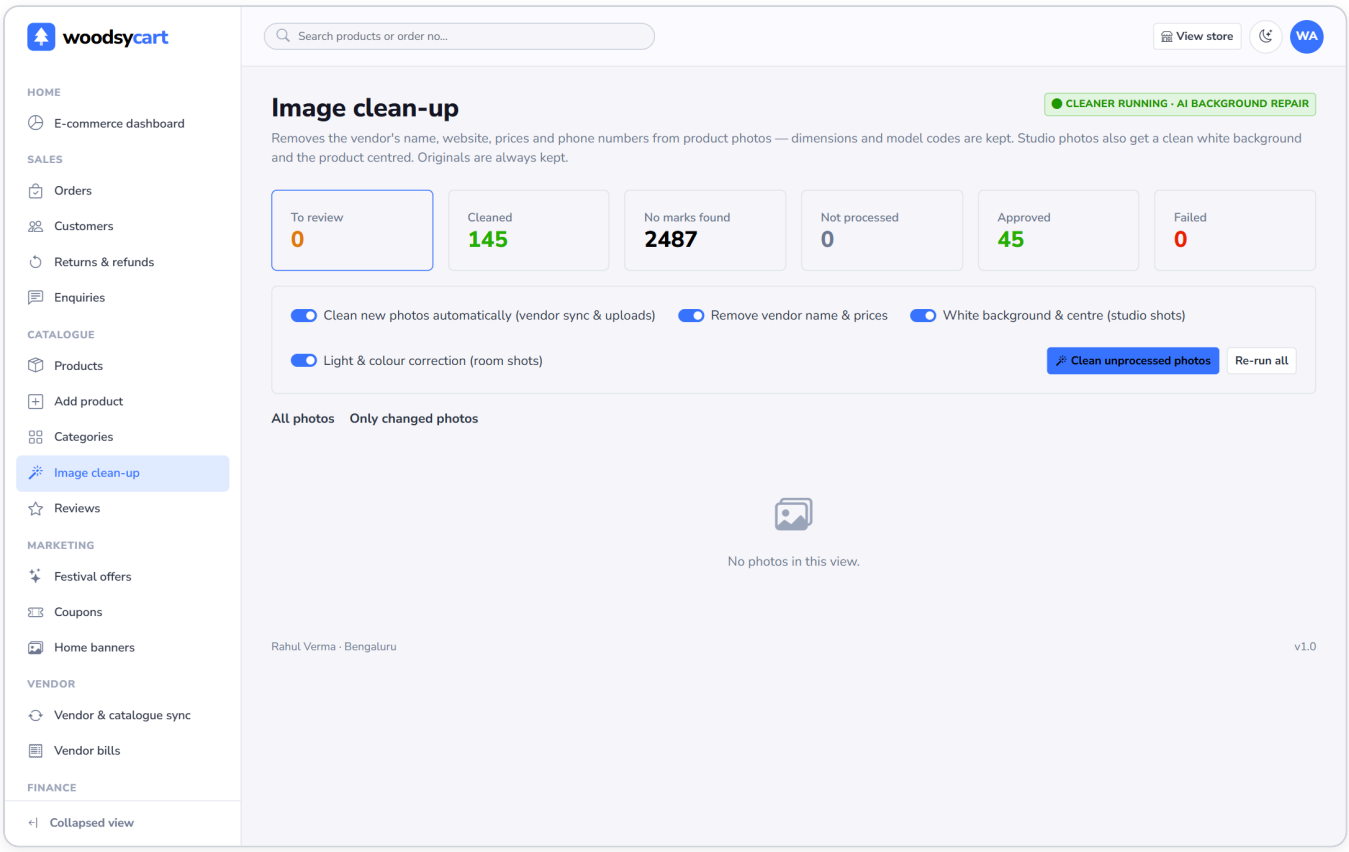

Image clean-up

- **Status cards:** whether the cleaner is **Online** (and with which repair engine: **LaMa** = AI repair, best quality), how many photos are **queued**, and counts per result.
- **Settings switches:**
  - **Clean new photos automatically (vendor sync & uploads).**
  - **Remove vendor name & prices.**
  - **White background & centre (studio shots):** also crops the blurred side strips.
  - **Light & colour correction (room shots).**
- **Buttons: Clean unprocessed photos**; **Re-run all** (after changing rules).
- **Results:**
  - **Clean:** nothing to remove.
  - **Cleaned:** text was removed.
  - **To review:** the tool wasn't sure (e.g. a bare number like "34500").
  - **Failed:** something went wrong.
  - **Restored:** you chose the original.
  - **Approved:** you confirmed the result.
- **Before / after grid:** the original and the cleaned photo side by side, with the text found shown as chips (red = removed, green = kept, yellow = review). **Looks good** approves; **Use original** switches back; **Re-**

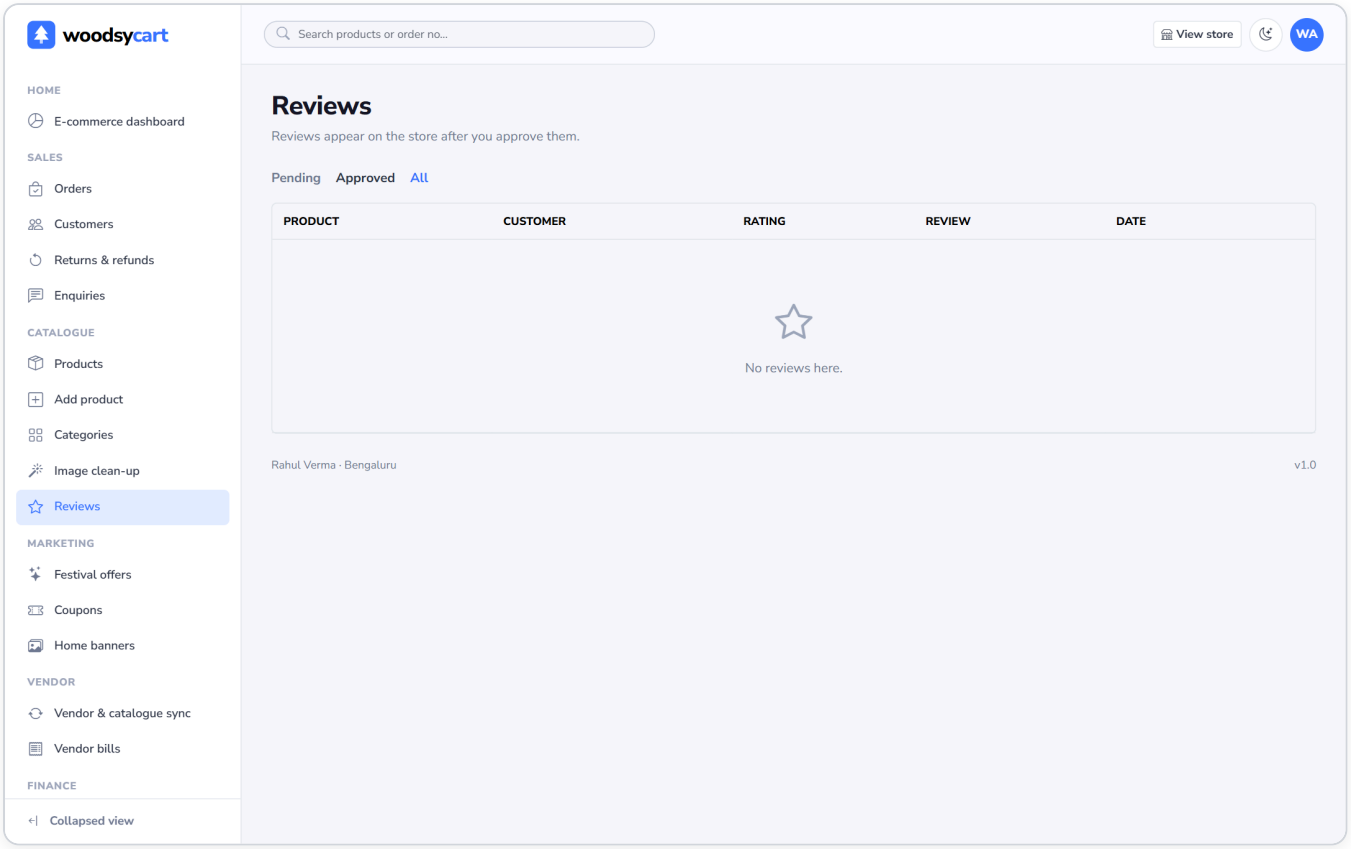

run cleans it again.

The original photo is always kept, so nothing is lost.

---

14. Catalogue → Reviews

Menu: Catalogue → Reviews. Tabs **Pending / Approved / All**.

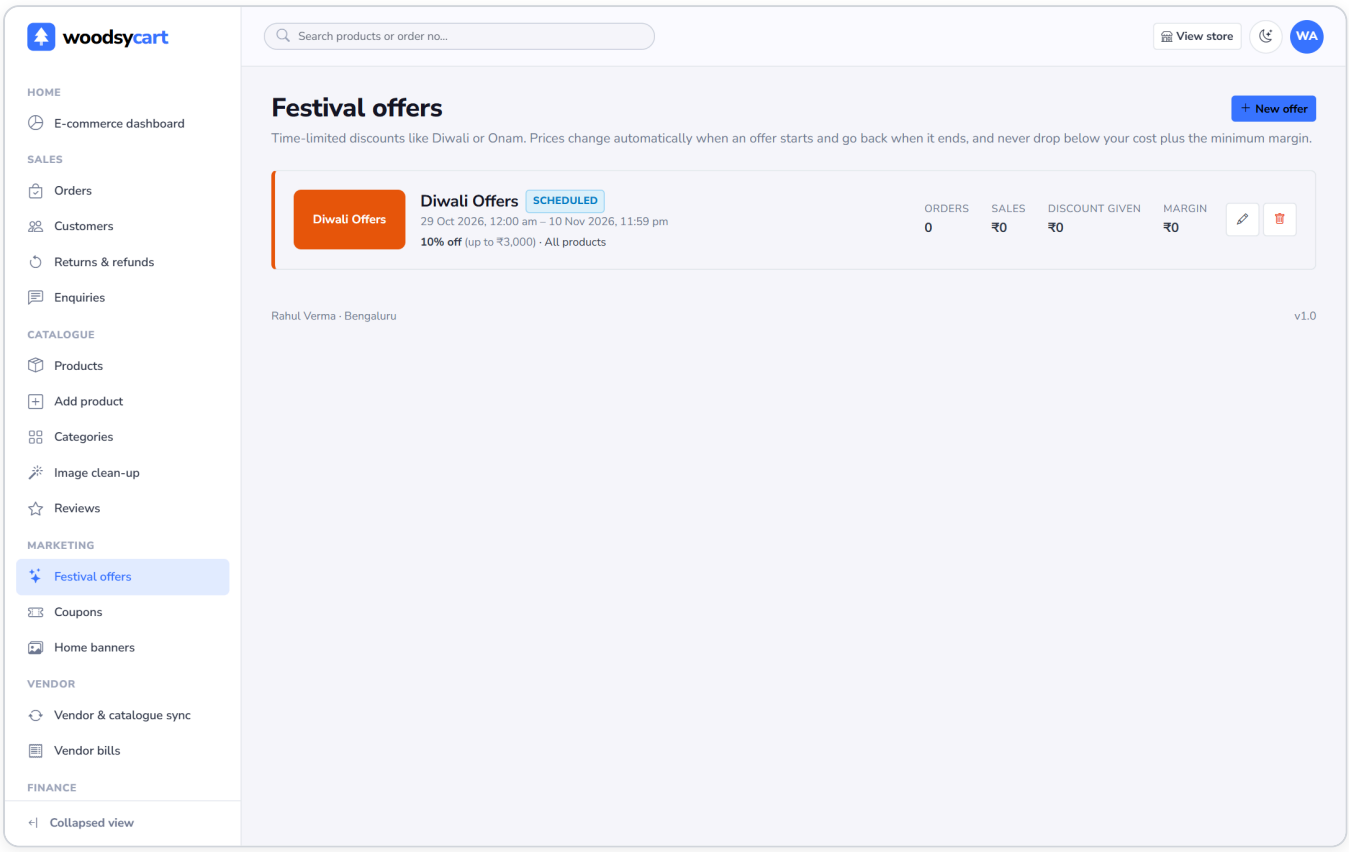

Reviews

Reviews appear on the store only after you **Approve** them. **Verified buyer** = the customer had a delivered order for this product. **Hide** takes an approved review down; 🗑 deletes it. A product's star rating counts approved reviews only.

15. Marketing → Festival offers

Menu: Marketing → Festival offers. Time-limited sales such as Diwali or Onam that **start and end by themselves**.

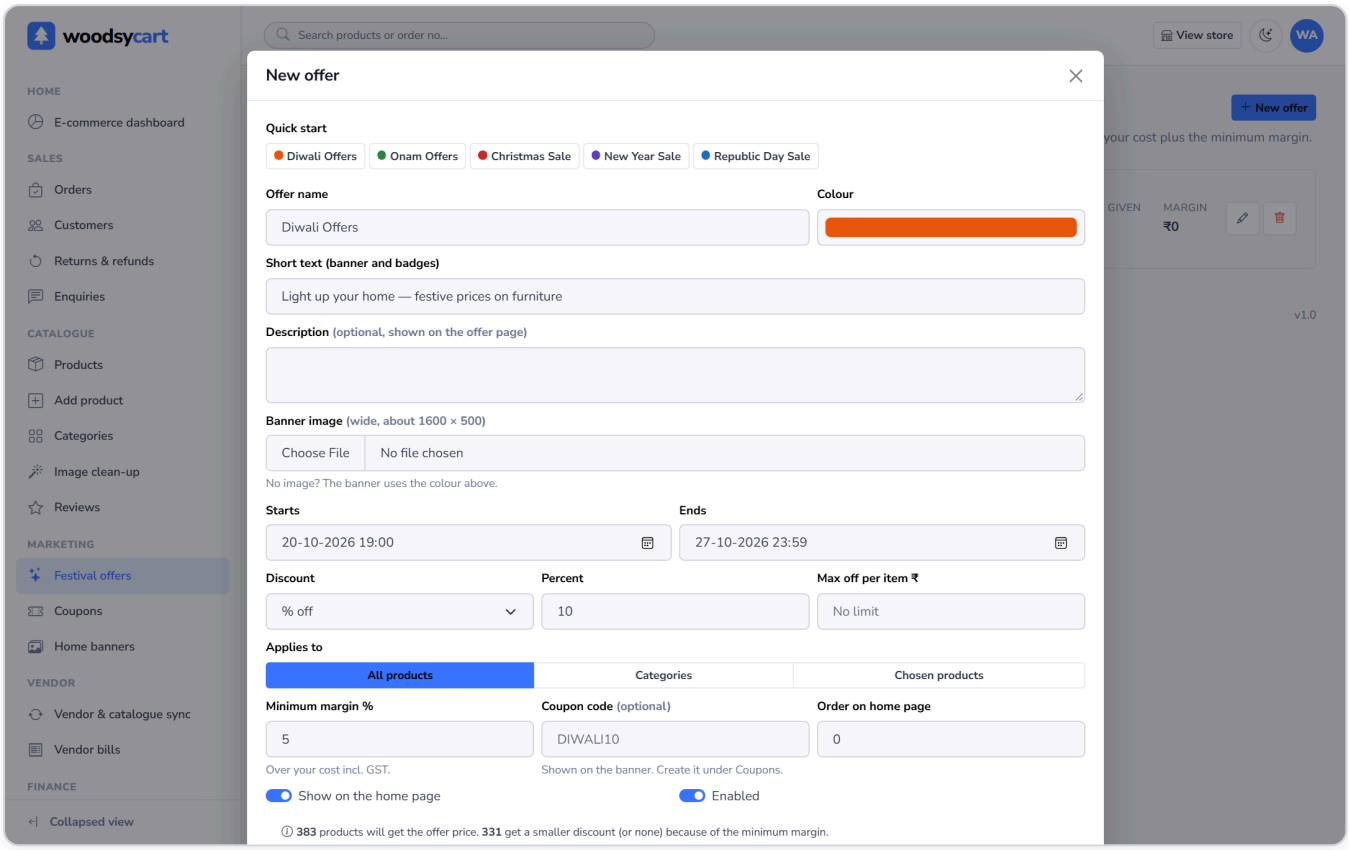

Festival offers

15.1 The offers list

Each offer card shows its banner (or colour), **status** (**Live now**, **Scheduled**, **Ended**, **Off**), dates, discount, what it applies to, **products on offer** (when live), and its results: **Orders**, **Sales**, **Discount given** and **Margin**. Buttons: ↗ view on the store (when live), ••• edit, 🗑 delete (only when it has no orders; otherwise switch it off).

15.2 Creating an offer

Offer form

1. **Quick start:** Diwali, Onam, Christmas, New Year or Republic Day fill in a name, text and colour.
2. **Offer name**, **Colour** (used for the banner and badges), **Short text**, optional **Description**.
3. **Banner image** (wide, about 1600 × 500). Without one, the banner uses the colour.
4. **Starts / Ends:** date and time. The offer switches on and off by itself (within about 30 seconds).
5. **Discount: % off** (with optional **Max off per item ₹**) or **₹ off each item**.
6. **Applies to: All products**, **Categories** (tick them) or **Chosen products** (search and add).
7. **Minimum margin %** (default 5%): the offer price never goes below your cost + this margin (3.9).
8. **Coupon code** (optional): shown on the banner. Create the coupon itself under Coupons.
9. **Order on home page**, **Show on the home page**, **Enabled**.
10. The blue line shows **how many products will get the offer price**, and how many get a smaller discount because of the minimum margin.

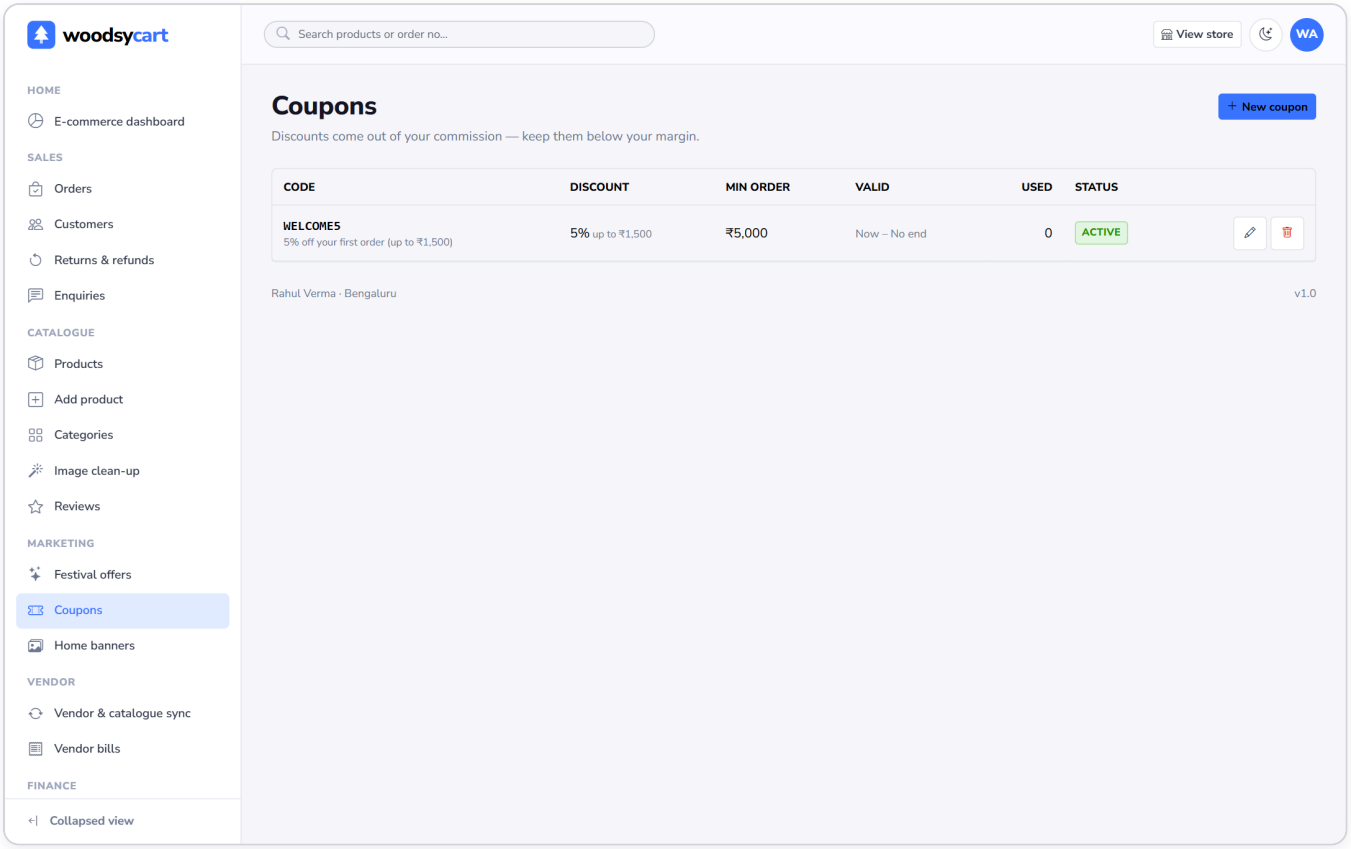

15.3 What customers see while it's live

A festive banner with a countdown at the top of the home page, a row of offer products, a highlighted link in the menu, the offer page `/offers/<name>`, badges on product photos, "*you save* ₹..." on product pages, and "*<Offer> price*" in the cart.

> **Watch out:** coupons still work on top of offer prices, and the minimum margin protects only the offer price. Don't combine a big coupon with a big offer.

16. Marketing → Coupons

Menu: Marketing → Coupons.

Coupons

Columns: Code, **Discount** (% or ₹, "up to" max), **Min order**, **Valid** (dates), **Used** (times used / limit), **Status**.

New coupon:

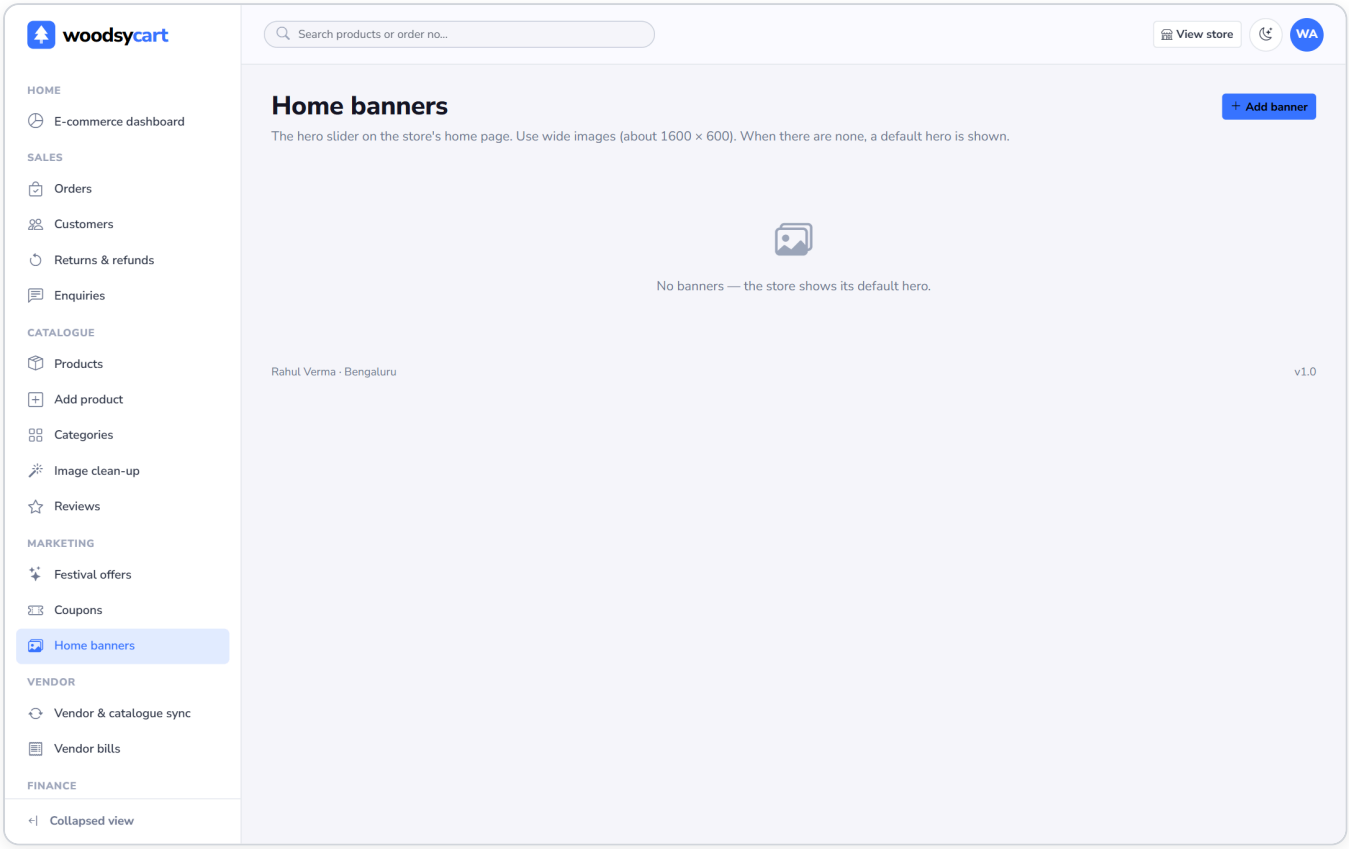

Field	Meaning
Code	What customers type, e.g. DIWALI10 (stored in capitals)
Type	Percent or Flat ₹
Description	Shown to customers
Value	10 = 10% (or ₹10 for flat)
Max discount ₹	Cap for percent coupons
Min order ₹	Cart must be at least this
Starts / Ends	Valid dates (empty = no limit)
Total uses	How many times it can be used in total (empty = unlimited)
Uses per customer	Per signed-in customer
Active	Switch off to stop it immediately

The discount comes out of **your** margin. A use is given back if the order is cancelled.

---

17. Marketing → Home banners

Menu: Marketing → Home banners. The big sliding pictures at the top of the store's home page.

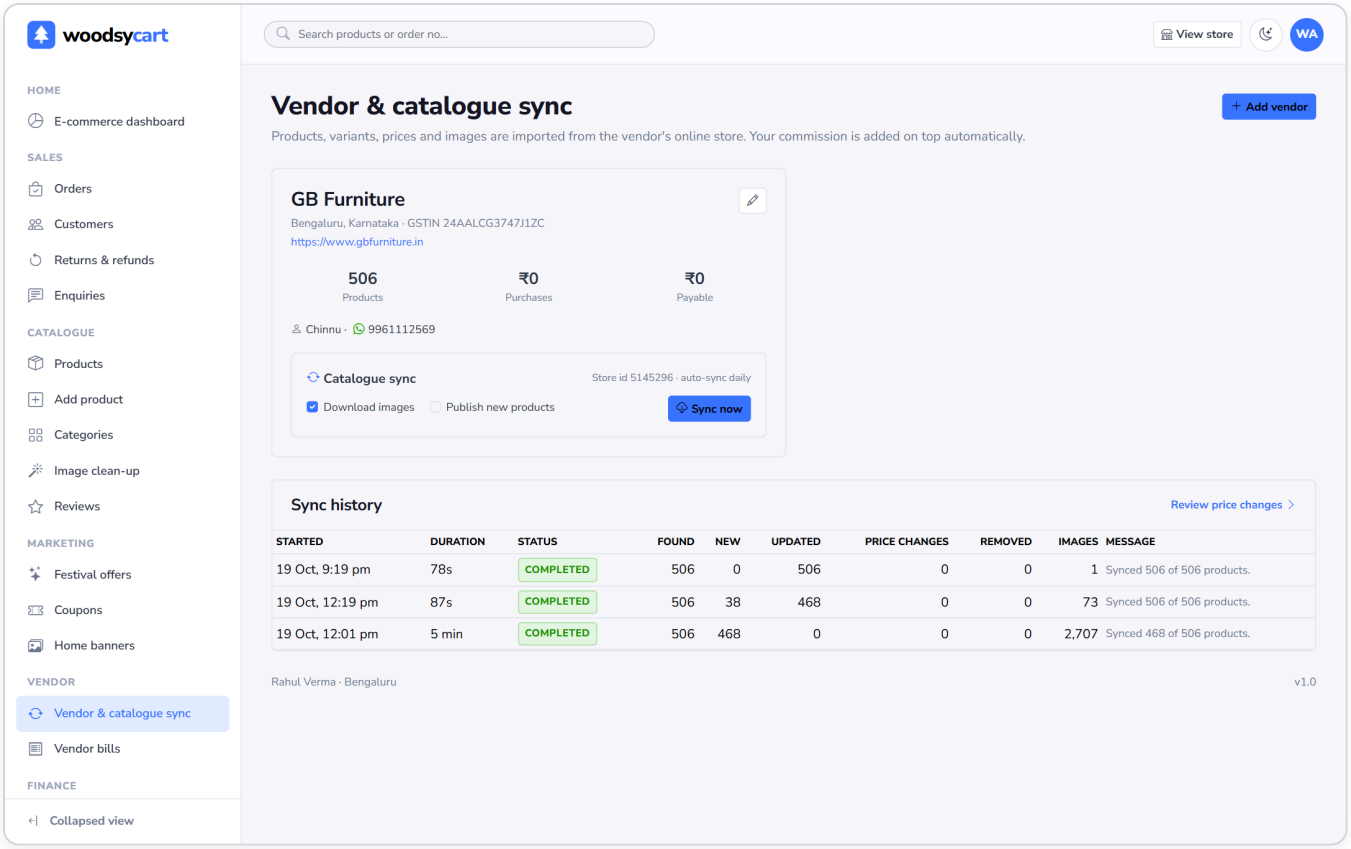

Home banners

Add banner: Image (wide, about 1600 × 600), **Title**, **Subtitle**, **Link** (e.g. `/shop?category=sofa` or `/offers/diwali-offers`), **Button text**, **Sort order**, **Active**. When there are no banners, the store shows its built-in welcome section instead. Banners have no dates, so switch them off yourself when a campaign ends.

18. Vendor → Vendor & catalogue sync

Menu: Vendor → Vendor & catalogue sync.

Vendor and sync

18.1 Vendor card

Name, city, **GSTIN**, website; **Products**, **Purchases** (total vendor bills) and **Payable** (bills not yet paid); contact person and **WhatsApp**. Add the vendor's WhatsApp number so **WhatsApp message** on orders opens their chat directly.

Edit vendor: contact details, address, GSTIN, **Bank details**, **Payment terms**, **DotPe store id** (needed for sync; GB Furniture's is 5145296), **Daily auto-sync**, **Active**.

18.2 Catalogue sync

Sync now imports the vendor's catalogue. Options:

- **Download images:** saves photos on your own server (recommended).
- **Publish new products:** new products go live straight away. Untick to review them as drafts first.

What happens, step by step (shown live on the progress bar):

1. **Reading vendor catalogue:** the list of all products and their categories.
2. **Downloading product details:** sizes, colours, variants, prices, stock and photos for each product.
3. **Updating categories & collections.**
4. **Updating products:**
    - New products are added. Products only sold in other cities are added as drafts.

- Prices are updated, and selling prices recalculated. Price changes are flagged.
- Stock is updated.
- Products the vendor removed are switched off.
- Your locked content and edited colours are kept.

5. **Downloading images** and **Optimising images** (resized for fast loading), then automatic clean-up of vendor names.

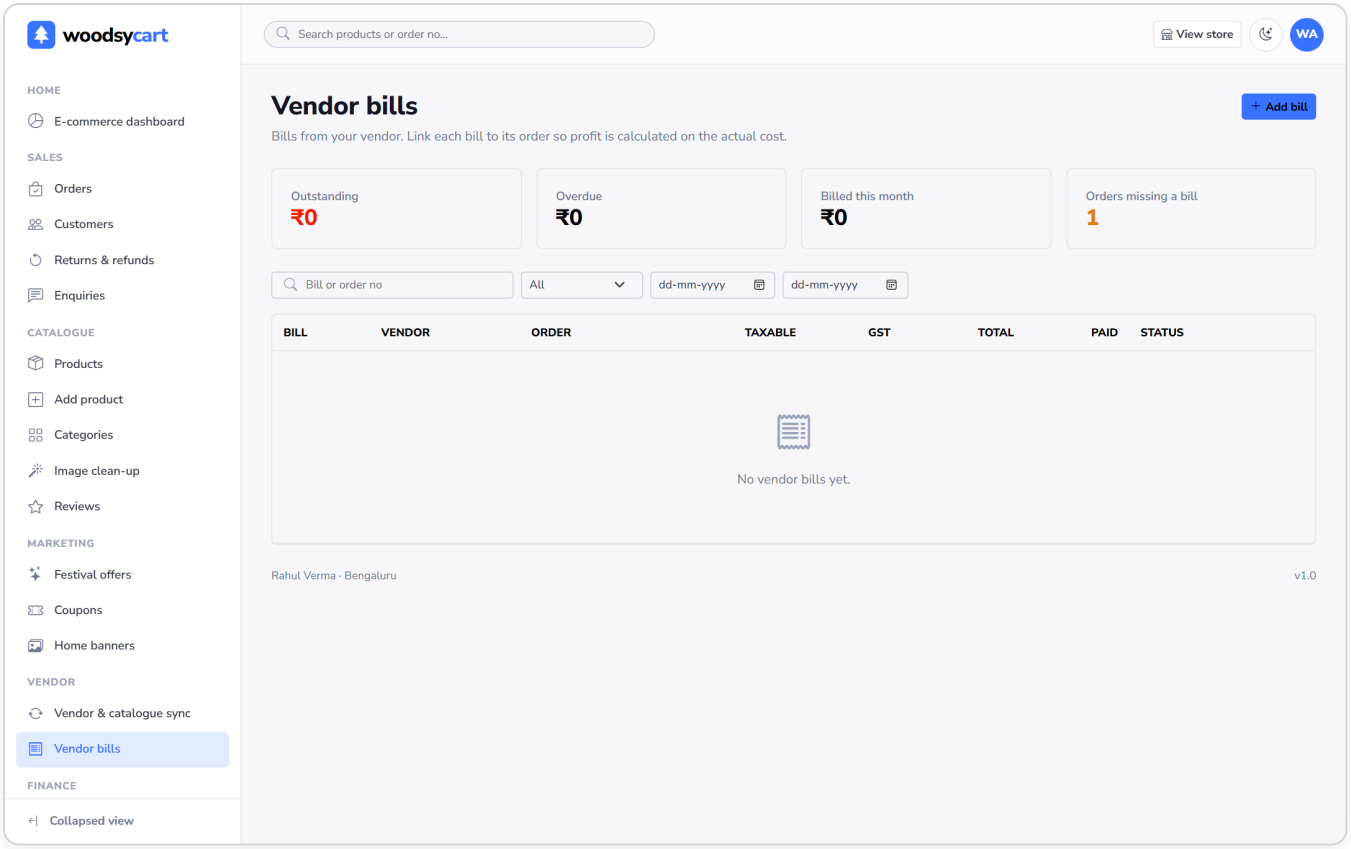

18.3 Sync history

Each run: **Started**, **Duration**, **Status**, **Found** (products at the vendor), **New**, **Updated**, **Price changes**, **Removed**, **Images**, message. **Review price changes** opens the products that need a look.

---

19. Vendor → Vendor bills

Menu: Vendor → Vendor bills. The vendor's invoices to you, and what you've paid them.

Vendor bills

Summary cards:

Card	Meaning
Outstanding	Total of all bills minus what you've paid
Overdue	The part of outstanding whose **due date** has passed
Billed this month	Bills dated this month
Orders missing a bill	Orders with the vendor or later that have no bill (click to see them)

Columns: Bill (number, date, due date), **Vendor**, **Order** (or *General* for bills not tied to one order, e.g. a sample piece), **Taxable**, **GST**, **Total**, **Paid**, **Status** (Unpaid / Partially paid / Paid).

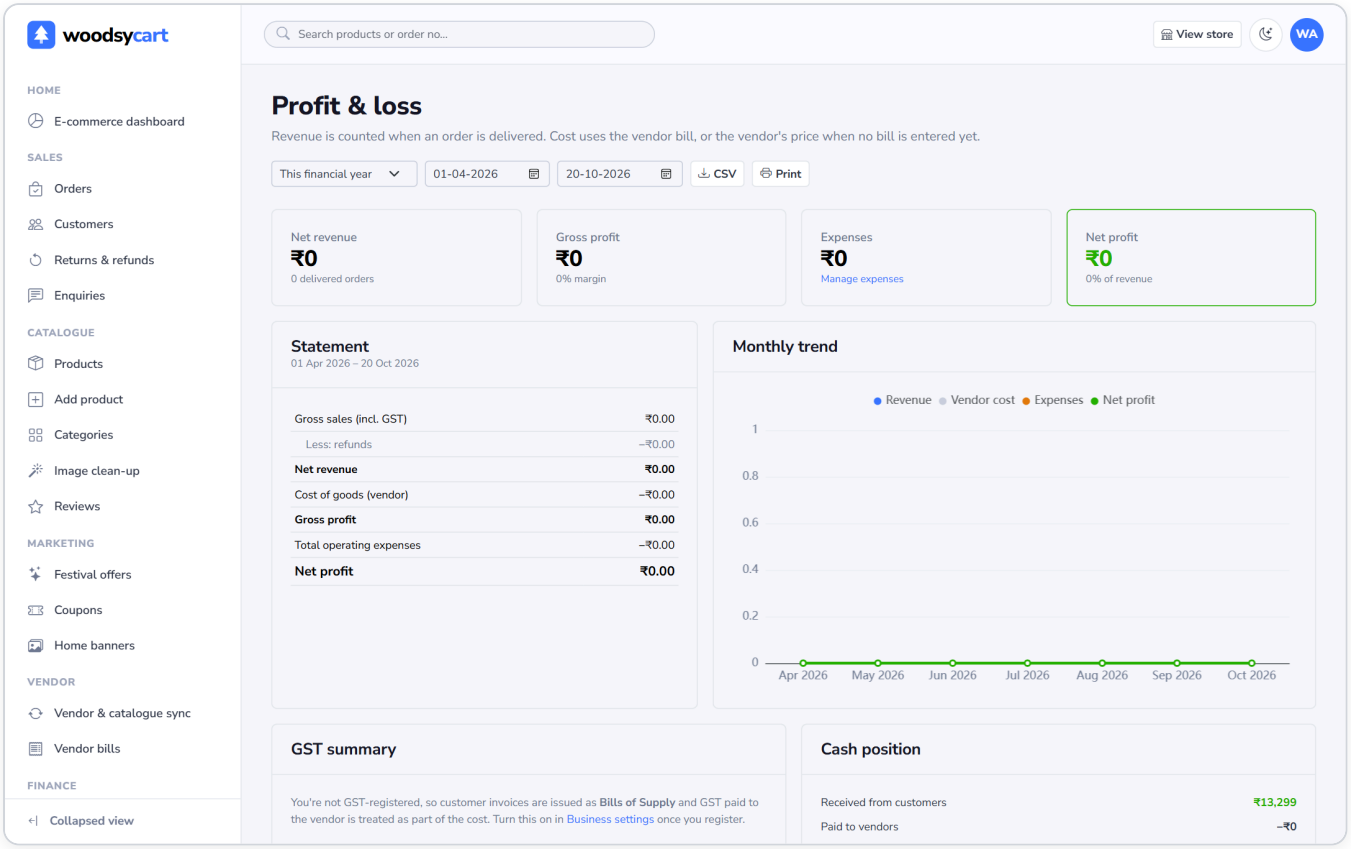

Actions: 📎 view the attached bill; **Pay** records a payment (**Amount**, **Paid on**, **Reference / UTR**); ✏ edit; 🗑 delete.

Add bill: Vendor, **Order ID** (optional; links the bill to an order so its profit becomes *Actual*), **Bill number**, **Bill date**, **Due date**, **Taxable value**, **GST**, **Delivery charges**, **Bill file**, **Notes**.

> **Tip:** the easiest way is **Add vendor bill** on the order page itself: it's linked automatically and pre-filled with the expected amounts.

20. Finance → Profit & loss

Menu: Finance → Profit & loss.

Profit and loss

Period: This month / Last month / Last 3 months / This financial year (April–March) / **Custom** dates. **CSV** downloads the report; **Print** prints it.

> **Important rule:** revenue is counted **when an order is delivered**, not when it's placed. A big order placed today shows in the dashboard's sales straight away, but only in P&L once it's delivered.

20.1 Top cards

Net revenue (with the number of delivered orders), **Gross profit** (with margin %), **Expenses**, **Net profit** (with margin %).

20.2 Statement: every line

Line	How it's worked out
Gross sales (incl. GST)	Total of delivered orders in the period
Already after discounts	Information only: festival-offer savings and coupons already taken off those sales

Line	How it's worked out
Less: GST collected	GST included in those sales (only if GST-registered; you pay it to the government)
Less: refunds	Refunds **processed** in the period
Net revenue	Gross sales − GST − refunds
Cost of goods (vendor)	For each delivered order, its vendor bill if entered, otherwise the vendor price at order time; plus bills not linked to orders. (Before GST if you're GST-registered, including GST if not.)
… is estimated	How much of the cost has no vendor bill yet. Add bills for exact figures.
Gross profit	Net revenue − cost of goods
Expense lines	Your expenses by category
Total operating expenses	Sum of expenses dated in the period
Net profit	Gross profit − expenses: **what the business actually earned**

20.3 Monthly trend

A chart of revenue, cost, expenses and net profit per month.

20.4 GST summary

- **GST-registered: Output GST** (on sales) − **Input GST** (on vendor bills and expenses) = **Net GST payable** to the government.
- **Not registered:** invoices are *Bills of Supply* without tax, and GST paid to the vendor is part of your cost.

20.5 Cash position

Actual money movements in the period, which is different from profit: **Received from customers**, **Paid to vendors**, **Expenses paid**, **Net cash flow**. Also, for all time: **Receivable from customers** (confirmed or delivered orders not fully paid) and **Payable to vendors** (unpaid bills).

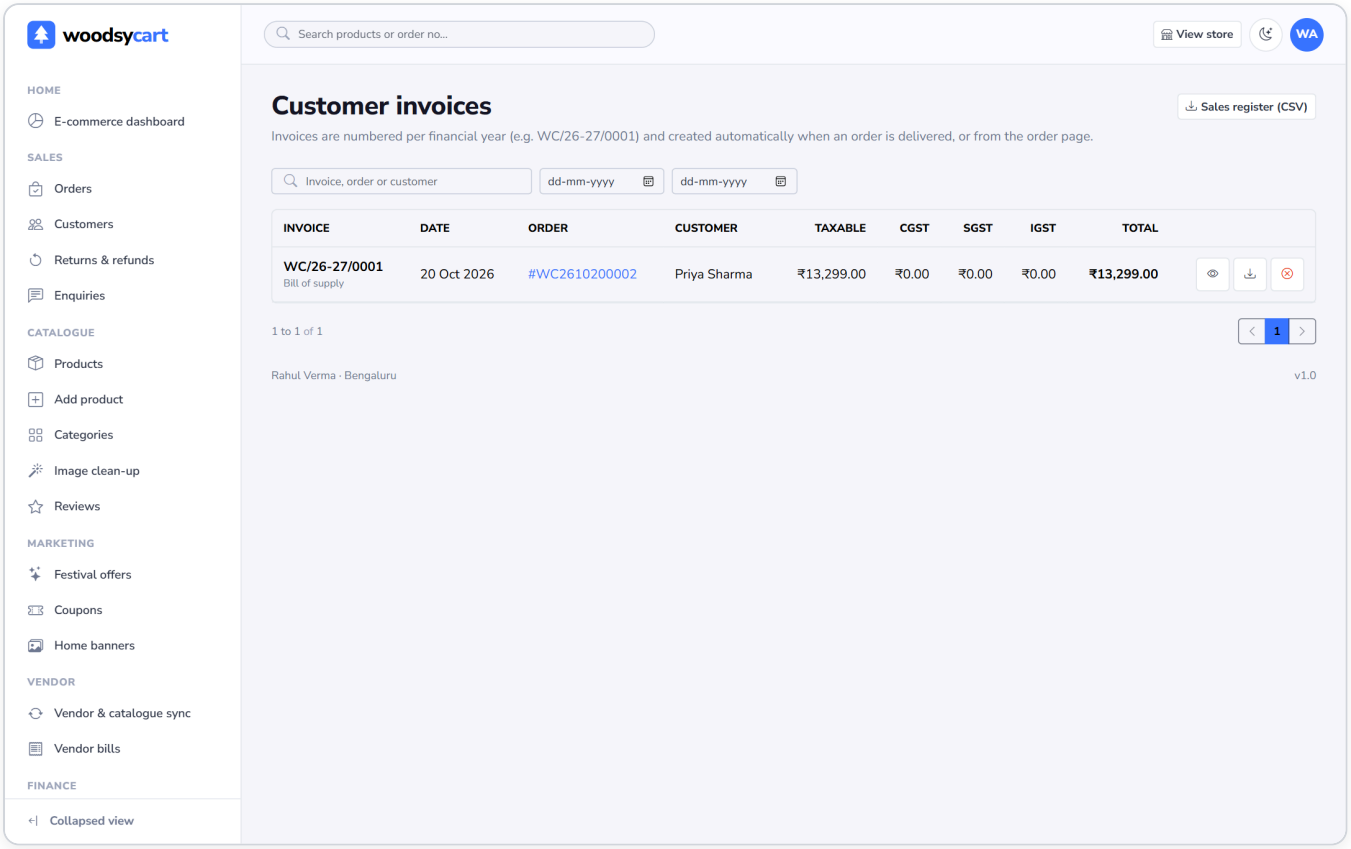

20.6 Profit by order

Every delivered order: **Revenue (ex-GST)**, **Cost** (✱ = estimated, no bill yet), **Profit**, **Margin**. Red rows lost money.

---

21. Finance → Customer invoices

Menu: Finance → Customer invoices.

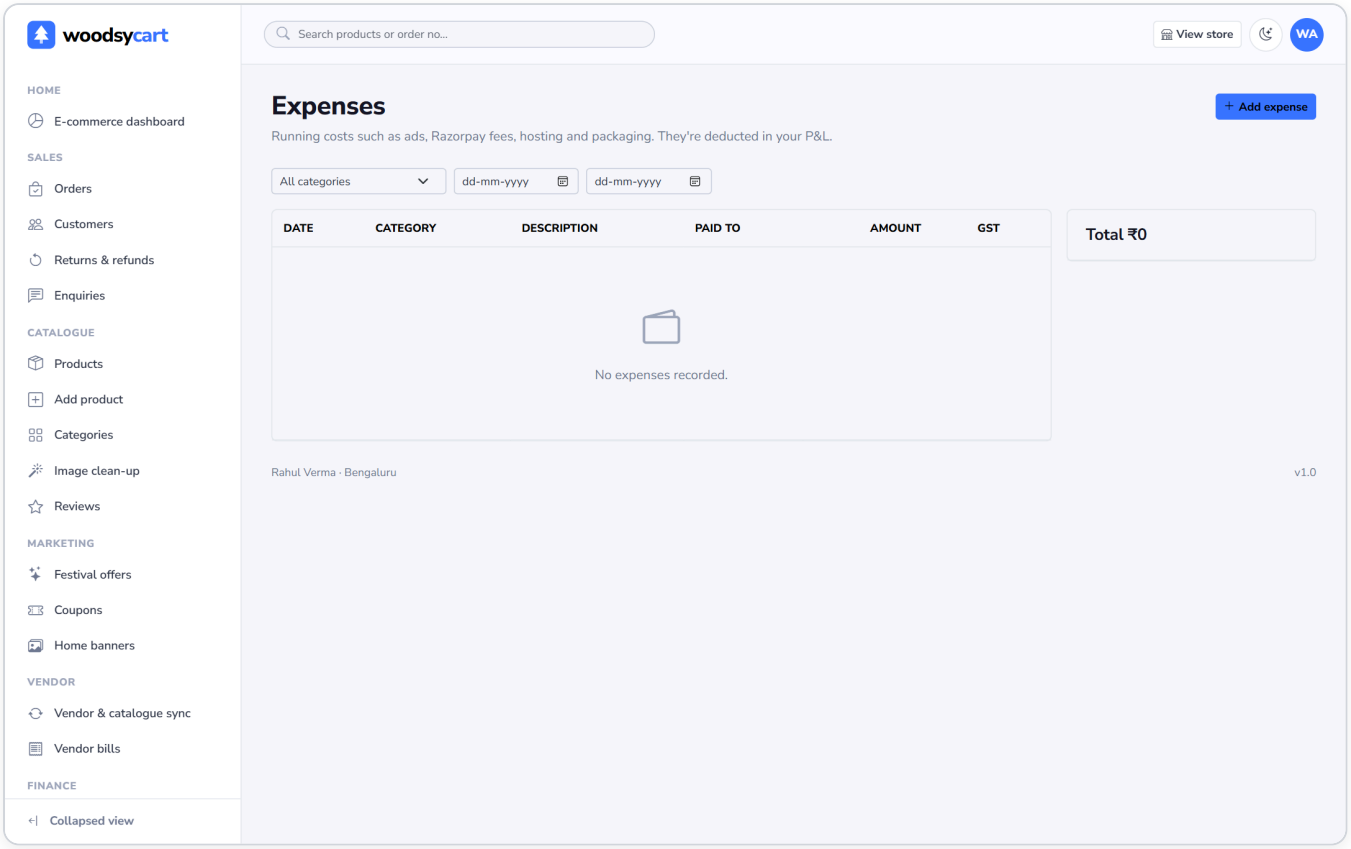

Customer invoices

- **Numbering:** `WC/26-27/0001` : your prefix, the **financial year** (April–March), then a running number that restarts each year. Set the prefix in Business settings → GST & invoices.
- **Tax invoice / Bill of supply:** when you're GST-registered, invoices are *Tax invoices* with GST shown; otherwise they're *Bills of supply* with no tax.
- **CGST + SGST** (half each) when the customer is in Karnataka, your own state; **IGST** when they're in another state.
- **When created:** automatically when an order is marked **Delivered**, or with **Generate invoice** on the order.
- **Actions:** 👁 open the PDF, ⬇ download, ⊗ **cancel** (a cancelled invoice stays in the list, greyed out, for your records; you can then generate a new one from the order).
- **Sales register (CSV):** all invoices for the date range, for your accountant or GST filing.

22. Finance → Expenses

Menu: Finance → Expenses. Running costs that aren't vendor bills.

Expenses

Categories: Marketing, Advertising, Packaging, Delivery, Payment gateway fees, Software & hosting, Salary, Rent, Utilities, Legal, Miscellaneous.

Add expense: Date, **Category**, **Description**, **Amount (ex-GST)**, **GST**, **Paid to**, **Payment mode**, **Reference**, **Receipt** (PDF/photo). The right panel shows the **Total** and the total per category for the selected filter. Expenses are subtracted in Profit & loss.

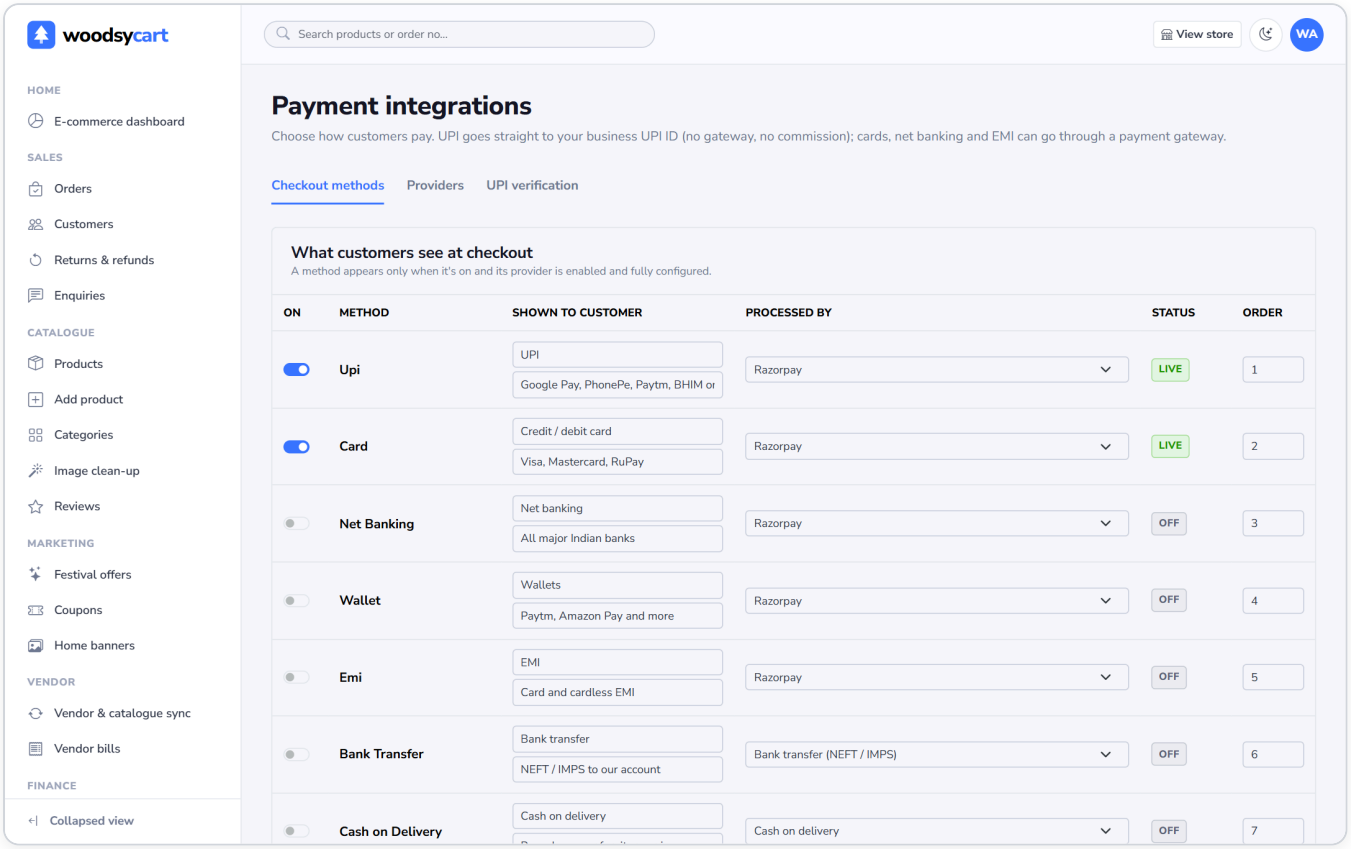

Gateway fees are added automatically. For every Razorpay payment, the fee Razorpay deducted becomes an expense (category **Payment gateway fees**, paid to Razorpay, "Deducted from settlement"). It uses Razorpay's own fee and GST figures, not an estimate. Example: a ₹313.86 fee is booked as ₹265.98 + ₹47.88 GST. Once a month, compare the total with Razorpay's monthly invoice; refunds, disputes and adjustments can change it, and each entry can be edited.

> **Tip:** record Google/Instagram ads, hosting and packaging every month, or your net profit will look higher than it really is.

23. Settings → Payment integrations

Menu: Settings → Payment integrations. How customers pay. There are three tabs.

23.1 Checkout methods tab

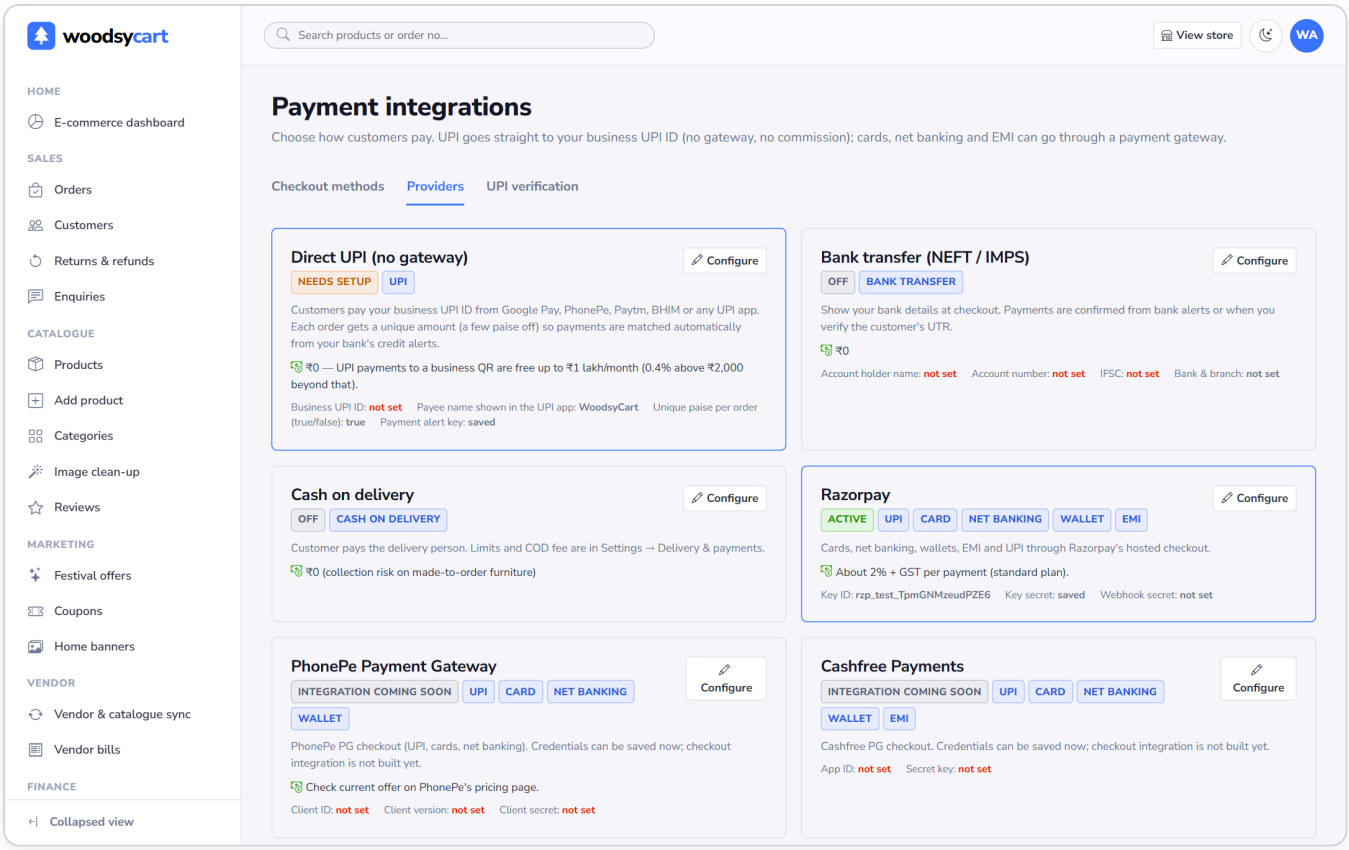

Checkout methods

The payment choices customers see at checkout:

Column	Meaning
On	Offer this method
Method	UPI, Card, Net banking, Wallet, EMI, Bank transfer, Cash on delivery
Shown to customer	The label and short description at checkout
Processed by	Which provider handles it, e.g. UPI → **Direct UPI (no gateway)**, ₹0 commission
Status	Whether it will actually appear (the provider must be on and set up)
Order	Position at checkout

A method only appears when it's on **and** its provider is enabled and fully configured. Press **Save checkout methods**.

23.2 Providers tab

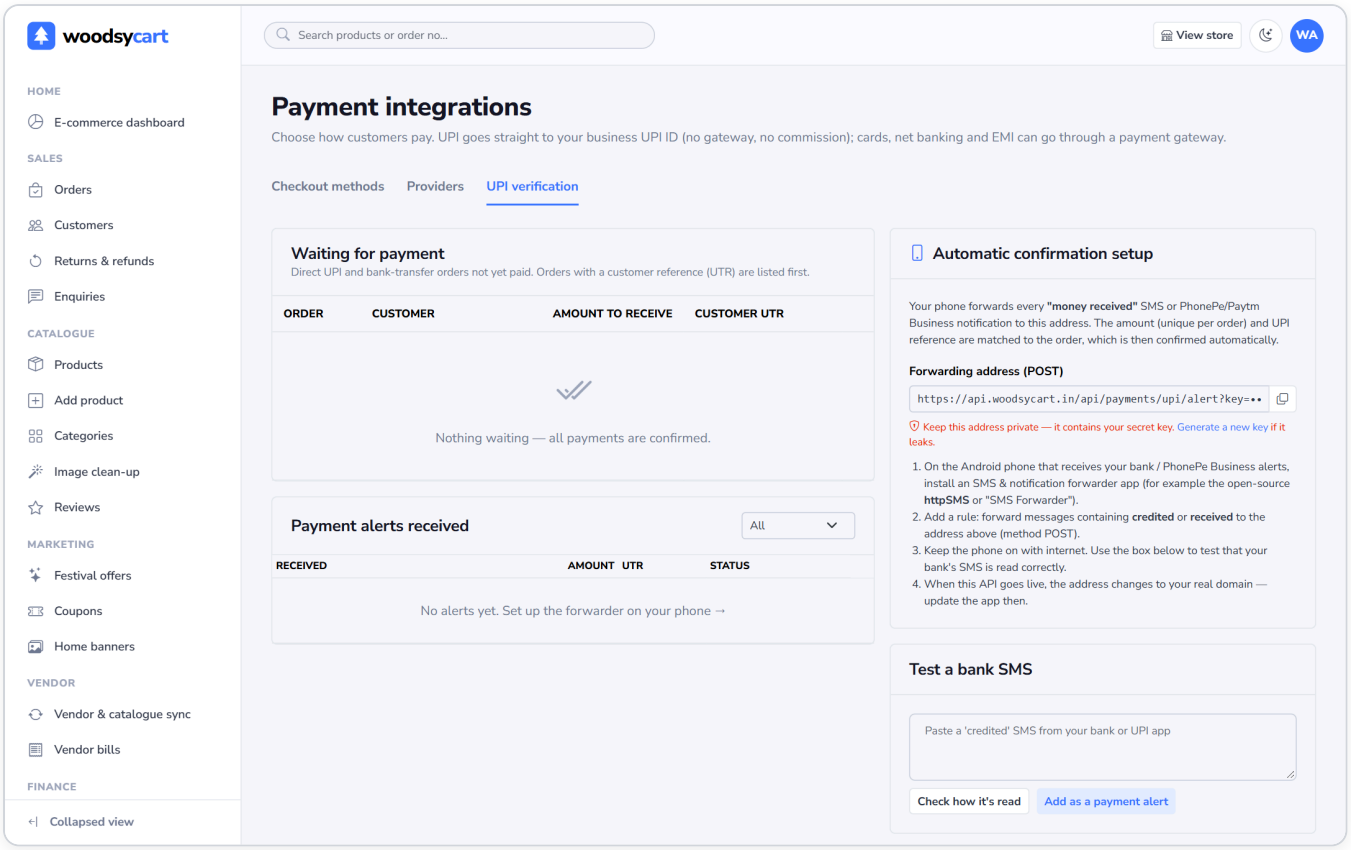

Providers

Each provider card shows **Active / Needs setup / Off / Integration coming soon**, the methods it can handle, its fees, and its settings ("saved" for secrets). **Configure** opens its settings:

- **Direct UPI (no gateway):** your business **UPI ID**, **payee name**, the **unique paise amount** switch (see 3.7) and the alert key. Free.
- **Bank transfer (NEFT / IMPS):** account name, number, IFSC, bank.
- **Cash on delivery.**
- **Razorpay:** key id and secret (live or **Test mode**). PhonePe, Cashfree, PayU and Paytm are listed for the future.

Secrets are stored encrypted and never shown again; you only see "saved".

23.3 UPI verification tab

UPI verification

- **Waiting for payment:** Direct UPI and bank-transfer orders not yet paid. Orders where the customer typed their **UTR** come first. Check your bank app, then confirm.
- **Payment alerts received:** "money received" messages forwarded from your phone, and whether each was matched to an order. Unmatched ones can be **matched** to an order by hand or **ignored**.
- **Automatic confirmation setup:** the **Forwarding address** for the SMS/notification forwarder app on your phone, with step-by-step instructions. Keep it private; **Generate a new key** if it leaks.
- **Test a bank SMS:** paste a real "credited" SMS and press **Check how it's read** to confirm the amount and reference are recognised. **Add as a payment alert** is for when your phone was offline when the payment came in.

23.4 Email & notifications

Menu: Settings → Email & notifications. The banner at the top says whether email is **on** (and which address it sends from) or **off**. While it's off, no emails go out at all.

Mail server tab

- **Send emails:** the main on/off switch.
- **Email provider:** choose a preset and the server and port fill in, with a short how-to:
  - **Gmail / Google Workspace:** needs an **App password** (Google Account → Security → 2-Step Verification → App passwords).
  - **Zoho Mail** (smtp.zoho.in) and **Microsoft 365 / Outlook:** SMTP sending must be allowed; with MFA, use an app password.
  - **Brevo:** free for 300 emails a day; use the SMTP login and SMTP key.

    - **Amazon SES (Mumbai)**, **Hostinger email**, or **Other (custom SMTP)**.
- **SMTP server**, **Port** (587) and **STARTTLS** (on). Port 465 isn't supported; use 587.
- **Username** and **Password / app password:** the password is stored encrypted and never shown again; leave it empty to keep the saved one.
- **From email** (usually the same as the username), **From name** (e.g. WoodsyCart), **Reply-to** (where customer replies go).
- **Admin notification emails:** add as many team addresses as you like; each one gets the admin emails.
- **Send a test email:** save first, then send a test. You see the mail server's answer straight away (for example "rejected the username or password").

Notifications tab: switch each email on or off.

To customers	To your team
Order placed (summary, total, delivery date, pay/track button)	New order (website and manual, with channel)
Payment received	Payment received
Order confirmed · Being made · Dispatched (with courier & tracking) · Out for delivery	A customer entered a UPI reference to check
Delivered, with the invoice PDF attached	Money received but no order matched
Delivery date changed (new date and reason)	Order cancelled by the customer
Order cancelled (with refund info)	Return requested
Return request received	New enquiry (with a WhatsApp reply button)
Refund processed	Review waiting for approval
Order update note ("Visible to customer" notes)	Vendor sync report (failed, or price changes / new products)
Welcome (new account)	
Enquiry received	

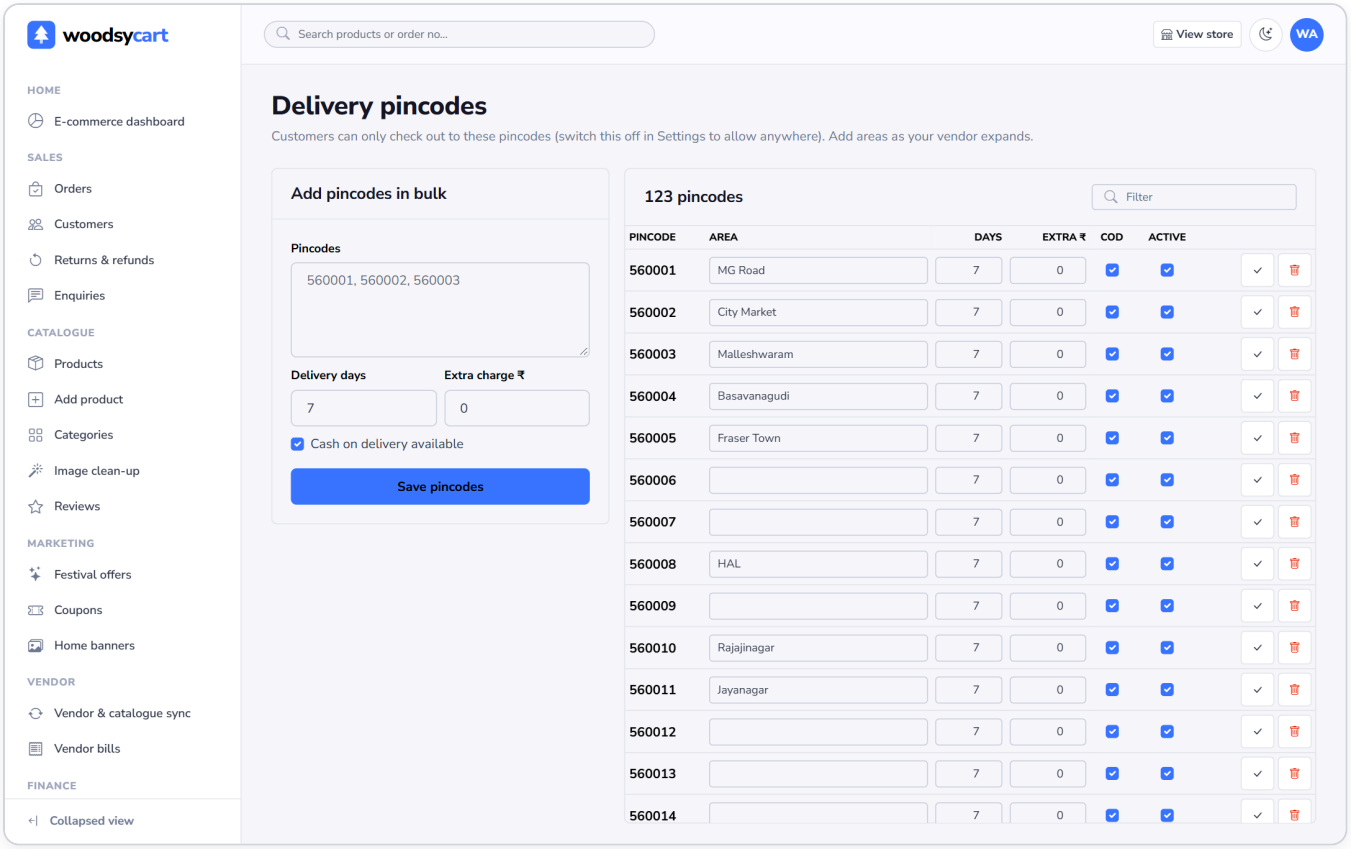

Customers without an email (e.g. some manual orders) simply get no emails. Status emails go out only when **Visible to customer** is ticked on the status change.

Sent emails tab: every email the app tried to send: when, which email, to whom, the subject, and **Sent**, **Failed** (with the mail server's reason) or **Skipped** (email was off). Filter by status, and use **Open order** to jump to the order.

---

24. Settings → Delivery pincodes

Menu: Settings → Delivery pincodes. Where you deliver.

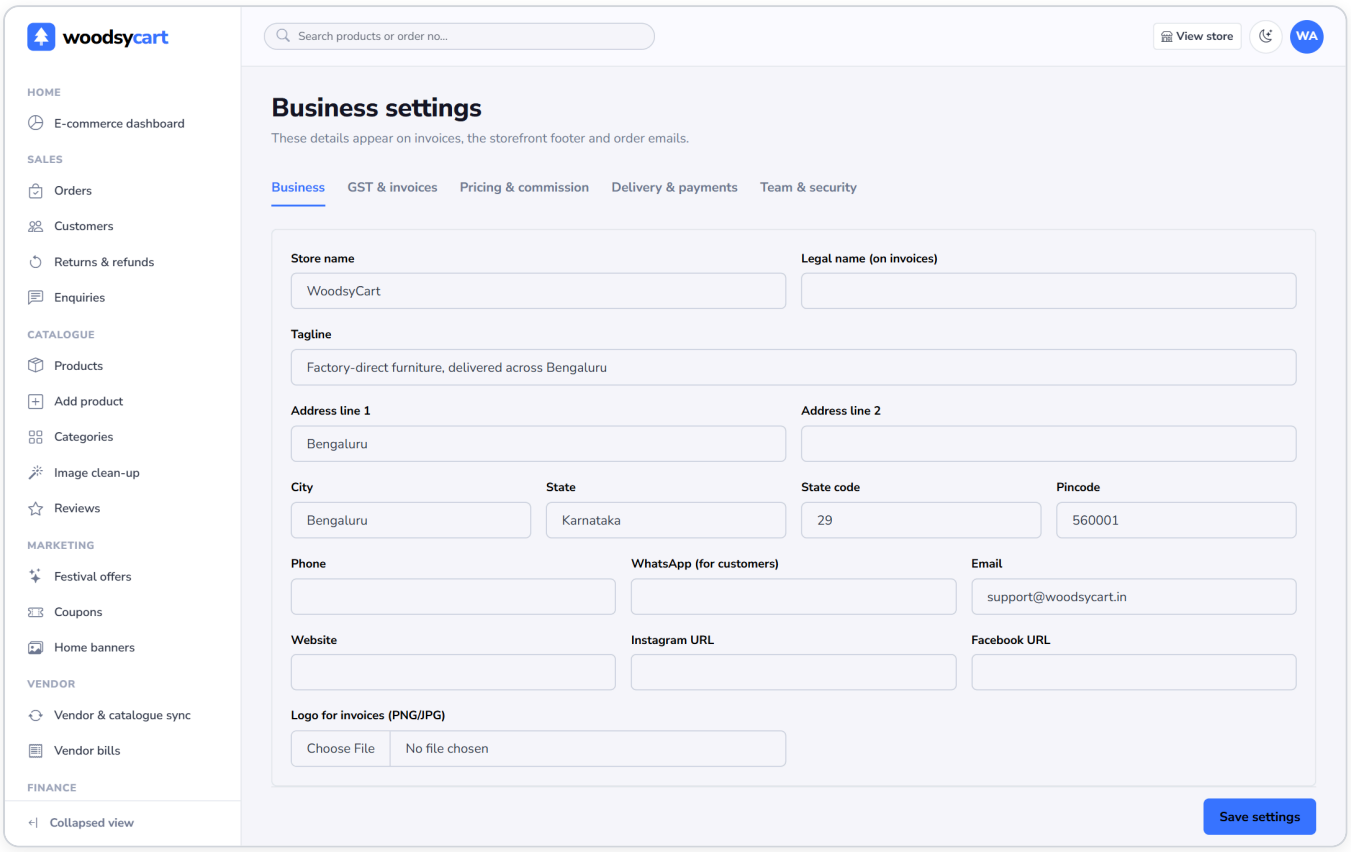

Delivery pincodes

- **Add pincodes in bulk:** paste pincodes (separated by commas or new lines), set **Delivery days**, **Extra charge ₹** (added to the delivery fee) and **Cash on delivery available**, then **Save pincodes**.
- **Table:** edit **Area**, **Days**, **Extra ₹**, **COD** and **Active** for each pincode, then press ✓ to save the row; 🗑 deletes it.
- When **Only deliver to pincodes in the delivery list** is on (Business settings → Delivery & payments), customers with other pincodes can't check out.
- The customer sees *"Delivery in X–Y days to <Area>"* when they check their pincode.

25. Settings → Business settings

Menu: Settings → Business settings (or the profile menu → Settings). Six tabs; press **Save settings** after changes.

25.1 Business tab

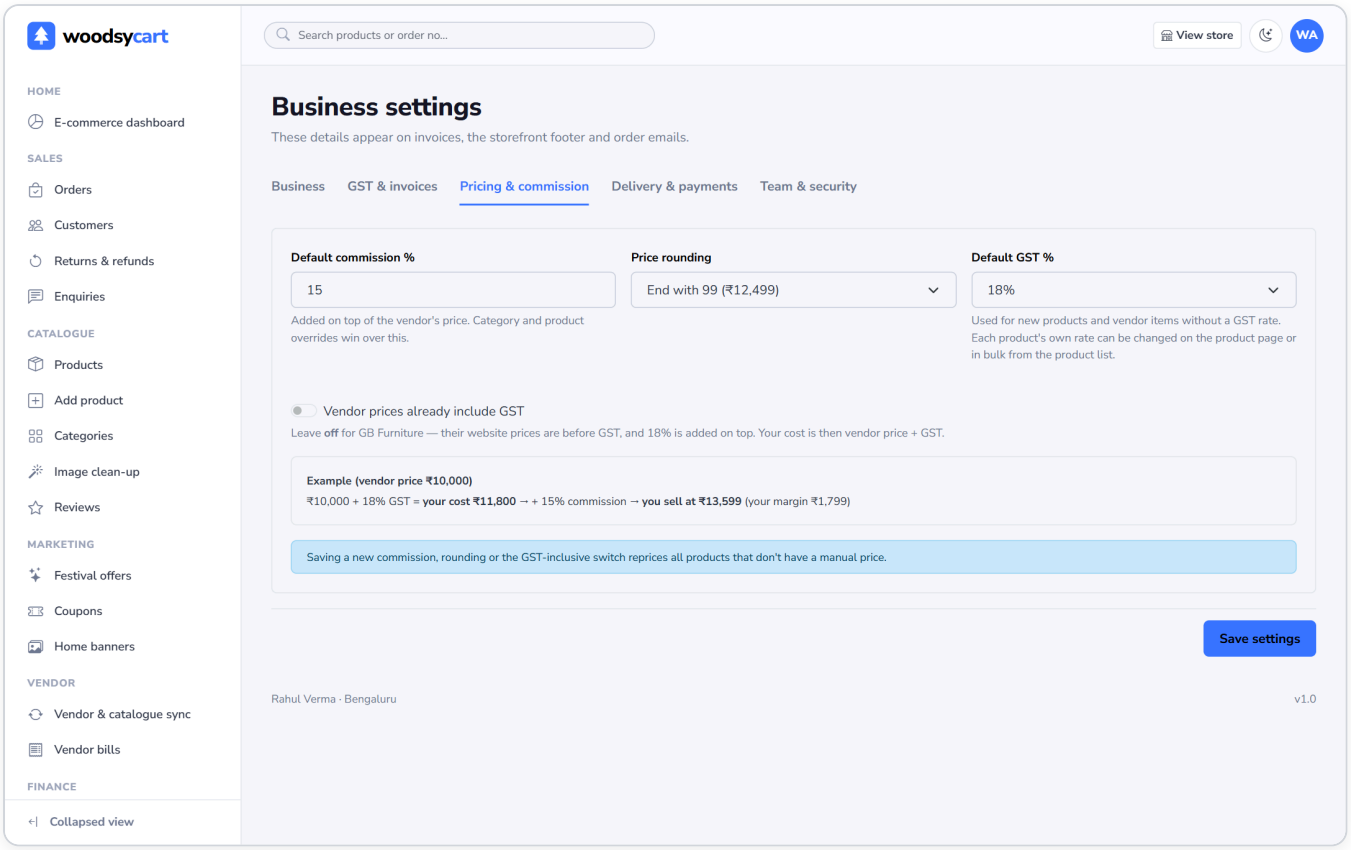

Business settings

Store name, **Legal name** (on invoices), **Tagline**, address with **State code** (used for GST: 29 = Karnataka), **Phone**, **WhatsApp** (shown to customers), **Email**, **Website**, **Instagram/Facebook URL**, **Logo for invoices**.

25.2 GST & invoices tab

I'm registered under GST (see chapters 20–21 for what it changes), **GSTIN**, **PAN**, **Invoice prefix**, **Bank details** and **UPI id** printed on invoices, **Invoice terms & conditions**.

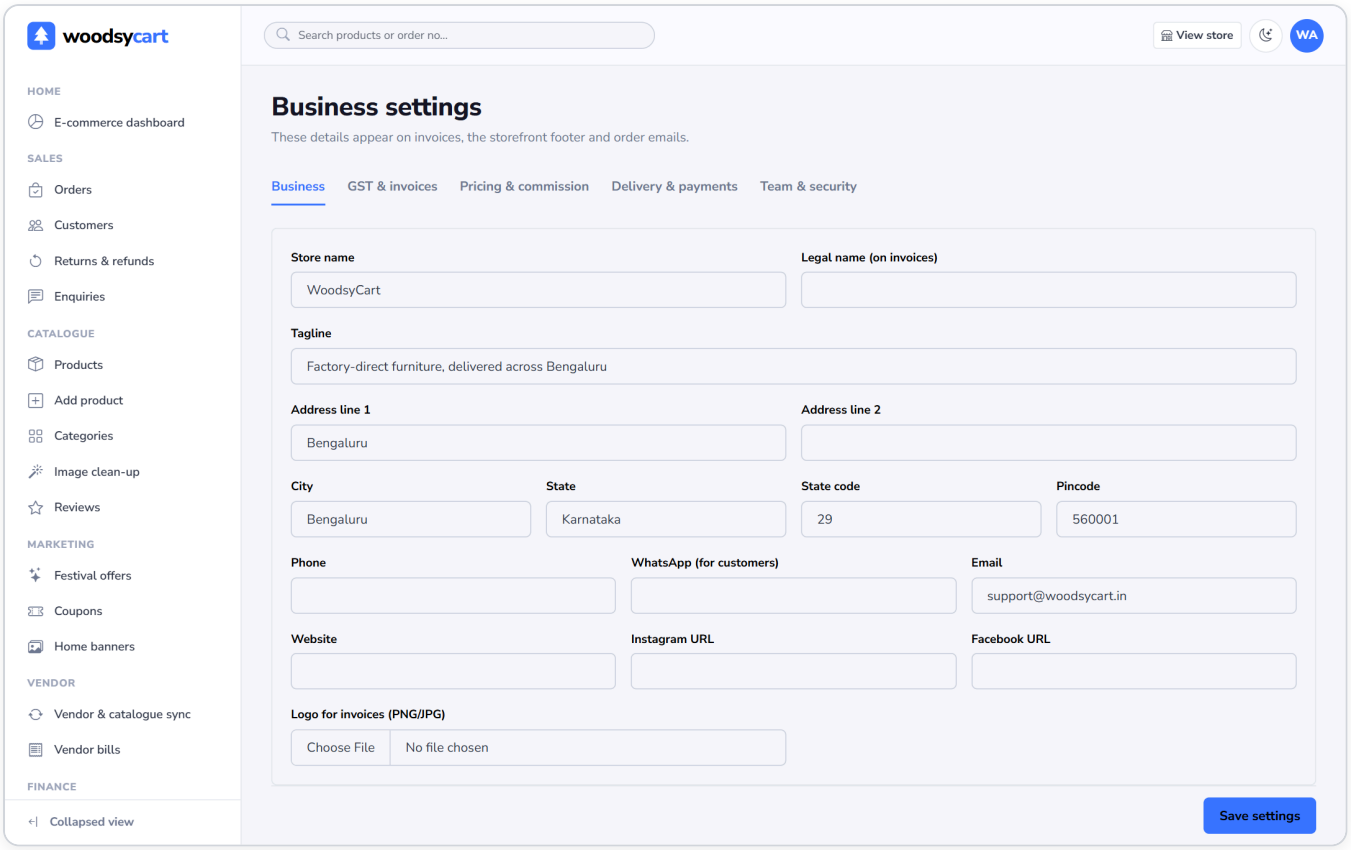

25.3 Pricing & commission tab

Pricing settings

Default commission %, **Price rounding**, **Default GST %**, **Vendor prices already include GST** (leave **off** for GB Furniture), and a live **Example** showing the cost, selling price and margin for a ₹10,000 product. **Saving reprices every product** that doesn't have a manual price.

25.4 Delivery & payments tab

Checkout settings

Setting	Meaning
Delivery fee ₹	Charged per order
Free delivery above ₹	Orders at or above this (after coupon) get free delivery. 0 = no threshold
Default delivery days	Used when a pincode has no own value
Allow cash on delivery	Turns COD on for the whole store
COD fee ₹	Extra charge for COD
Max COD order ₹	Larger orders can't use COD
Only deliver to pincodes in the delivery list	Restricts checkout to your pincode list

> **Watch out:** furniture is made to order. A refused COD delivery still costs you the vendor's price. Keep the COD limit low.

25.5 Maps tab

Lets customers pin their exact delivery location on a Google map at checkout and in My account → Addresses.

- **Let customers pin their location on a map:** switches the map on (only works with a key).
- **Google Maps API key:** the browser key from Google Cloud. The tab has step-by-step instructions:
  1. create a project;
  2. link billing;
  3. enable **Maps JavaScript API**, **Places API (New)** and **Geocoding API**;
  4. create the key;
  5. restrict it to woodsycart.com (and localhost for testing) and to those three APIs;
  6. set daily quotas and a budget alert so you can never be charged.
- **What customers get:**
  - a search box with Google suggestions;
  - **Use my current location**;
  - a map where they move the pin onto their gate.
  - Pincode, city, state and area fill in automatically; they only type the flat number.
- **What you get:**
  - the order page shows **Open the pinned location in Google Maps**;
  - the vendor's WhatsApp message includes the location link, which helps on new layouts and big apartment complexes.
  - Orders without a pin get an address search link instead.
- **Cost:** Google's India pricing gives 70,000 free map loads, address lookups and search suggestions every month, enough for about 14,000 checkouts.

25.6 Team & security tab

- **Team:** each member's **Name**, **Email**, **Role** (Admin / Staff), **Last login** and **Status**. **Add member** / ✏ to edit; on an existing member, **Reset password (optional)** sets a new password.
- **Change my password:** your current password and a new one (8+ characters).

---

26. Daily, weekly and monthly routines

Every morning (15 minutes)

1. **Dashboard** → **Needs your attention**: anything new?
2. **Orders** → **Needs action**:
   - **Pending:** check the payment arrived (Payment integrations → **UPI verification**), then **Mark confirmed**.
   - **Confirmed: WhatsApp message** to the vendor → **Mark placed with vendor**.
3. Ask the vendor about orders **With vendor**. If something is late, **Change** the delivery date with a reason.
4. **Dispatched** orders that arrived: **Mark delivered** (and tick "collected on delivery" for COD).
5. **Enquiries**: reply to new ones on WhatsApp.

Every week

1. **Orders** → **Missing vendor bill**: add the vendor's bills.
2. **Vendor bills**: pay what's due and record it with **Pay**.
3. **Products** → **Vendor price changed**: check the new prices, then **Accept price change**.
4. **Reviews**: approve the genuine ones.
5. **Image clean-up** → **To review**: approve or restore.

Every month

1. **Expenses**: add ads, gateway fees, hosting, packaging.
2. **Profit & loss** → **Last month**: check net profit; download the **CSV** for your records.
3. **Customer invoices** → **Sales register (CSV)** for your accountant / GST filing.
4. Plan the next **Festival offer**.

---

27. Status reference

Order status

Status	Meaning
Pending	Placed; waiting for payment or your confirmation
Confirmed	Payment received / approved; not yet sent to the vendor
Placed with vendor	The vendor is making / preparing it
Dispatched	The vendor sent it
Out for delivery	On the last leg (optional step)
Delivered	Received by the customer; invoice created; counts in P&L
Cancelled	Cancelled before dispatch
Returned	Returned after delivery and refunded

Payment status

Status	Meaning
Pending	Nothing received yet
Partially paid	Part of the total received
Paid	Fully received (differences under ₹1 count as paid)
Failed	An online payment failed
Refunded	Fully refunded
Partially refunded	Part refunded

Other statuses

Where	Statuses
Purchase order	Draft → Sent → Accepted → Dispatched → Delivered (or Cancelled)
Vendor bill	Unpaid → Partially paid → Paid
Refund	Requested → Approved → Processed (or Rejected)
Enquiry	New → In progress → Closed
Festival offer	Scheduled → Live now → Ended (or Off)
Image clean-up	Not processed, Clean, Cleaned, To review, Failed, Restored, Approved
Product	Published / Draft; In stock / Out of stock; Featured

28. Questions and troubleshooting

A customer paid by UPI but the order is still Pending. Open **Payment integrations** → **UPI verification**. If the payment alert arrived but wasn't matched, match it to the order. If no alert came (phone offline), check your bank app and use **Record payment** on the order with the UTR.

The customer can't find their order on "Track order". They must enter the order number and the mobile number used at checkout (any format: +91, spaces…). Check the phone number on the order page.

A product shows the wrong price. Check the product's **Pricing** tab: the vendor price, GST %, commission override and whether **manual price** is on. Category commission and **Business settings** → **Pricing** also affect it.

The vendor's price changed. Do I need to do anything? Your selling price is updated automatically. Just review it under **Products** → **Vendor price changed**, then **Accept price change**.

Why is my P&L lower than the dashboard? The dashboard counts orders when they're **placed**; P&L counts them when **delivered**, after GST, refunds, vendor costs and expenses.

Why does an order's profit say "Estimated"? No vendor bill is linked yet. Add it from the order page.

A photo still shows the vendor's name. Open **Image clean-up**, find the photo and press **Re-run**, or replace the photo on the product.

I deleted something by mistake. Deleted products are hidden, not erased. Ask your developer to restore them. Orders, invoices and payments can't be deleted from the app.

Someone left the team. Business settings → **Team** → edit them → switch **Active** off.

---

29. Glossary

Term	Meaning
AOV	Average order value = total spent ÷ number of orders
Bill of supply	Invoice without GST (when you're not GST-registered)
CGST / SGST / IGST	GST split: central + state (same state), or integrated (other state)
COD	Cash on delivery
Commission	Your mark-up % on top of your cost
Drop-shipping	You sell; the vendor makes and delivers directly to the customer
GSTIN	GST registration number
HSN code	Product tax classification printed on invoices (furniture: 9403)
Margin	Selling price − your cost
MRP	Maximum retail price (shown struck through)
PO	Purchase order: your order to the vendor
Slug	The readable part of a web address, e.g. `queen-size-bed`
Sync	Copying the vendor's catalogue into your store
UTR	Unique transaction reference of a UPI/bank payment (12 digits)
Variant	One sellable combination of options, e.g. 6×5 ft in Walnut
Vendor	The supplier who makes the furniture (GB Furniture)
